**Sent:** Thursday, March 01, 2007 3:48 PM  
**To:** Christopher Ryder  
**Subject:** assembly drops

I talked to Elaine Keegan about this subject. She's an HP here at the NRC, but used to work at Vermont Yankee as an HP. While she was there they dropped an assembly and in that case there wasn't any damage to the assembly. She said that dose rates were also not an issue when this happened.

I asked her about moving assemblies too high. She said that of course they could mess up the set points so that an assembly could be moved higher but she never saw that happen and even if it did, so long as it was still under a good amount of water, the doses would not be an issue.
