Re: License #13-13144-02

To Whom It May Concern:

In accordance with NRC Regulatory Issue Summary 2007-22, dated 10/04/07, we request amendment to our radioactive materials license #13-13144-02 to include the accelerator produced materials that will now be considered byproduct materials under the new guidelines. We request that gallium-67, thallium-201, iodine-123, indium-111 and fluorine-18 be included on our license for diagnostic nuclear medicine procedures. Also, we possess cobalt-57 sealed sources as check, calibration, transmission and reference sources. These are each less than the 10CFR 35.65 limit of 30 millicuries.

Thank you and we look forward to receiving this amendment.

Sincerely,

James Callaghan, M.D., President
