

2208

DOCKET NO. 11005711

March 25, 2008

U.S. Nuclear Regulatory Commission,

I would like to add my objections to the many others you have received as to you granting the import license to EnergySolutions for bringing nuclear waste from Italy to Utah.

It's bad enough we have this dump in our state in the first place but to bring in waste from out of the country is going way too far.

Any place that has nuclear waste should have a dump in their own area to take care of it.

I hope you will think of the many families who would be in danger if something were to happen in the area of the dump such as the earthquake that occurred in Wells, Nevada a short time ago. Wells isn't all that far from Tooele County.

I have children and grandchildren who live in the Tooele valley just over the mountain from the dump. What happens to them and all of the other children and grandchildren who live here if some kind of disaster were to occur?

Please reject the license that EnergySolutions is requesting for this and any other kind of waste especially if it involves bringing it in from another country.
