

May 11, 2008

Dear commission members:

The US should NOT become the world's nuclear dumping station! I hear that the Nuclear Regulatory Commission is considering an application for the importation of 20,000 tons of nuclear waste from Italy designated to Tennessee and Utah. We have nuclear plants in Tennessee, from which we have to deal with their radioactive waste. We don't need to start taking more nuclear waste products from around the world! Please abort this disastrous contemplation immediately!

Thank you for taking time to read my appeal.
