Docket No. 52-014 and 52-015
SRP Section: 09.02.01 - Station Service Water System
Application Section: 9.2.1

QUESTIONS from Balance of Plant Branch 1 (SBPA)

09.02.01-1

Interactions between two cooling towers may adversely affect the cooling capacity of the service water system (SWS). Adverse interactions can occur due to localized atmospheric influences caused by siting and relative proximity considerations. Because this is not a factor for single cooling towers, it is not addressed by the AP1000 DCD. Therefore, please address potential adverse interactions between the existing Bellefonte cooling towers and describe in the Bellefonte FSAR any additional design provisions that are necessary, as appropriate.
