 Subject: Stop EnergySolutions' Italian nuclear waste import submission

June 11, 2008 (4:07pm)

OFFICE OF SECRETARY
 RULEMAKINGS AND
 ADJUDICATIONS STAFF

Insert personal comments here: : Responsibility for any sort of waste disposal needs to remain with its producer. Without their bearing the burden of having to solve the problem, solutions are unlikely to be developed - and what incentive would the producers have to implement them anyway if we've let them off the hook in the first place? Here are some examples where putting the monkey on the back of the industry creating the problem:

Think about how well auto manufacturers can do and have done - when mandated - to reduce emissions and increase gas mileage of their cars. Also think about how little progress is made in these areas without the mandates.

Think about how - when mandated - solid waste managers were able to drastically reduce landfill use by having consumers sort their waste and by changing their procedures to make use of transfer stations where they could do more effective recycling and reuse of materials. Would this progress have occurred without the mandate? I doubt it.

Like my examples above, we need to put the squeeze on nuclear power producers (and to keep it there) to solve their own waste problems. They need to have powerful incentives to find a way to make it much less harmful, to recycle it, and to produce less. Whatever they do produce needs to be able to be stored in their own countries. Allowing transfer of waste from one country to another is simply letting the waste producers off the hook and postponing the long-term solution that needs to be developed.

Development of creative solutions for nuclear waste are needed, but they do not include sending it to other countries for permanent storage. That is NOT a solution!

Finally, regardless of whether any mandates are to be put in effect to reduce waste production, neither a private company nor a foreign government should have an ability to bring dangerous waste materials into someone else's country.
