Docket No. 52-014 and 52-015
SRP Section: 09.05.01 - Fire Protection Program
Application Section: 9.5.1.8.2.2

QUESTION Fire Protection Team (SFPT)

09.05.01-12

RG 1.189, Regulatory Position 4.1.7 states that the fire brigade and safe shutdown operators should be provided with a portable radio communications system. The regulatory guide also states that this radio system should not interfere with the security communications system, should have fixed repeaters installed, be protected from fire damage, and should have preoperational and periodic testing to demonstrate that the frequencies used will not affect the actuation of protective relays. However, the Bellefonte COLA contains no reference or requirement or description concerning the fire brigade radio communication system as described above. The applicant should describe the program that ensures the fire brigade portable communication system will be installed and operated in accordance with the parameters described above (i.e., provide adequate repeaters to prevent communication dead-zones, and demonstrate that the fire brigade radio frequencies do not interfere with any other radio or electronic systems by preventing the fire brigade radios from functioning properly and by causing other plant systems from functioning properly).
