**License No. 21-26460-01**

Attention Materials Licensing Branch,

Cammenga and Associates, Inc. has been the contractor of choice for the U.S. military lensatic, handheld, compass since 1993. The compass is illuminated with Tritium filled micro-lights (vials). The following discussion is a request to alter our schedule of urine testing, employee review testing, and survey wipe testing.

In addition, Kristina VanderMaat, currently listed on our license, has moved away, thus leaving employment of Cammenga and Associates, Inc. Please remove her name from our license.

Sincerely,

CAMMENGA AND ASSOCIATES

Michael Pastoor  
Vice President/Operations  
Radiation Safety Officer

DISCUSSION:

The safety of our methods is extremely high and the history of uptake is "nil".

For the last 11 years that I have been with Cammenga & Associates, Inc., we have focused on safety in both consistency of our methods and proper handling of the vials.

Currently, we survey wipe tests daily or weekly of many zones, tables, and other restricted areas as well as monthly wipe tests of non-restricted areas such as administrative office desks, shop floors, etc. Contamination has not been present in these areas.

We conduct monthly urine tests of all employees, including administrative personnel and those working in unrestricted areas. We also retrain them and test them every six months.

When our program was developed, our administrative offices were in close proximity to restricted areas and these personnel were involved with the daily management of these areas. However, several years ago, we changed the administrative office location (at which time a revised drawing was sent to your office) and have made some other changes. Administrative personnel rarely frequent restricted areas. Many production employees, who several years ago performed multiple jobs in and out of restricted areas, now focus on stations and tasks in their own non-restricted areas.

PROPOSAL:

We will follow our current schedule of testing for restricted areas and personnel working in those areas.

We will change our survey wipe testing of unrestricted areas and urine testing of personnel not working in restricted areas to a 6-month schedule. If testing of restricted areas show contamination results from testing, then adjacent unrestricted areas will be tested at that time. We will retrain and test administrative personnel annually.
