Westinghouse identified (b)(4) power recovery installations and 16 power uprate installations in a proprietary report a year or so ago. Of these (b)(4) power recoverys are not in operation - (b)(4) due to UFM error, and (b)(4) the uprates are not in operation - 2 because we denied the uprate request and one because we were going to deny the request - all for reasons the licensees did not dispute.

Warren,

Are any plants using the WEC UFM? If so, how many, and how many have had MURs?

Also, FYI, Commissioner Jaczko has requested a briefing via the EDO's office on this issue and the WEC letter.

Thanks,

Tom
