Re: License 13-32551-01

This is to notify your agency that there has been a change at this facility, which might or might not be considered a change in control of our licensed material. Until now, the physicians (Authorized Users) of Radiation Oncology Associates have owned and operated this facility at 7910 West Jefferson. On July 3, 2008, ROA entered into a management agreement with OnCure Medical Corporation*, by which OnCure purchased all the equipment, including the HDR machine. Ownership of the building remains with ROA, however, and the name of the facility will not change.

All ROA employees involved with the operation and use of the HDR became employees of OnCure. The Authorized Users on our license (the ROA physicians) will continue to supervise and direct all care of the patients. Anthony Fernando and John F. Agnew continue their roles as Authorized Medical Physicists. John F. Agnew remains as Radiation Safety Officer.

The HDR machine will continue to be used in the same shielded room, and all safety equipment and procedures will remain unchanged.

Every safety aspect of the HDR program will be maintained, including calibrations and other testing prior to first use of a new source, radiation surveys of facility and patients, quality assurance of patient plans, and safety and functionality tests prior to each day's use.

Depleted radioactive sources will be returned to the manufacturer as in the past. It is agreed that we will abide with all constraints, conditions, requirements, and commitments contained in the current license and future amendments to it, and that we will adhere to the best practices of radiation safety in the use of the machine.

Deepchand Bajpai, M.D.
Radiation Oncology Associates

John F. Agnew, Ph.D.
Radiation Safety Officer
