Their notice has typos in isotope names. No such thing as Pu-230. Also the Pu-239/Be source in the table refers to a neutron source. I don't think this applies to HEU and WGPu.

Based on the WG Pu sealed source application, our source falls under the Category 2 in this proposed rule for Am, Cm, and Pu.

This appears to support the need for the RFIDs on the 9977 containment vessel, which is a DOE initiative.

It appears that this rule will impact the vendors and universities, so they should be alerted about this as well

SUNSI Review Complete
Template = ADM-013

RFIDS = ADM-03
Add = S. Bagley (Shb)

Is this another area of concern for our sources?
