

## **Response to Question 19-95: Supporting MAAP Cases Results**

### **APPENDIX A**

**List of Figures**

Figure A 1: Hydrogen mass in containment for 2" Seal LOCA cases with 100%,  
 75% and 50% PARS efficiency ..... 18

Figure A 2: Hydrogen mass in containment for cases c1\_1e and c3\_4..... 19

Figure A 3: Hydrogen in containment and containment pressure for case c1\_1 ..... 20

Figure A 4: Hydrogen in containment, cases c3\_8 and c3\_13 ..... 21

Figure A 5: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1, containment node 1) ..... 22

Figure A 6: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1, containment node 3) ..... 23

Figure A 7: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1, containment node 5) ..... 24

Figure A 8: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1, containment node 8) ..... 25

Figure A 9: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1, containment node 10) ..... 26

Figure A 10: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1, containment node 23) ..... 27

Figure A 11: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1a, containment node 1) ..... 28

Figure A 12: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1a, containment node 5) ..... 29

Figure A 13: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1a, containment node 10) ..... 30

Figure A 14: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1a, containment node 23) ..... 31

Figure A 15: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1aa, containment node 1) ..... 32

Figure A 16: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1aa, containment node 5) ..... 33

Figure A 17: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1aa, containment node 10) ..... 34

Figure A 18: Oxygen and steam concentrations (dimensionless) versus time  
 (seconds) cross-plotted with calculated hydrogen concentration  
 limit for flame acceleration (case c1\_1aa, containment node 23) ..... 35

Figure A 19: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_1e, containment node 1) .....	36
Figure A 20: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_1e, containment node 3) .....	37
Figure A 21: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_1e, containment node 5) .....	38
Figure A 22: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_1e, containment node 8) .....	39
Figure A 23: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_1e, containment node 10) .....	40
Figure A 24: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_1e, containment node 23) .....	41
Figure A 25: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_2, containment node 1) .....	42
Figure A 26: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_2, containment node 3) .....	43
Figure A 27: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_2, containment node 5) .....	44
Figure A 28: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_2, containment node 6) .....	45
Figure A 29: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_2, containment node 10) .....	46
Figure A 30: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_2, containment node 23) .....	47
Figure A 31: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_3, containment node 1) .....	48
Figure A 32: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_3, containment node 5) .....	49
Figure A 33: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_3, containment node 8) .....	50
Figure A 34: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_3, containment node 10) .....	51

---

Figure A 35: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_3, containment node 23) .....	52
Figure A 36: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_6, containment node 1) .....	53
Figure A 37: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_6, containment node 3) .....	54
Figure A 38: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_6, containment node 5) .....	55
Figure A 39: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_6, containment node 10) .....	56
Figure A 40: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_6, containment node 23) .....	57
Figure A 41: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7, containment node 1) .....	58
Figure A 42: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7, containment node 5) .....	59
Figure A 43: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7, containment node 8) .....	60
Figure A 44: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7, containment node 10) .....	61
Figure A 45: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7, containment node 23) .....	62
Figure A 46: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7d, containment node 1) .....	63
Figure A 47: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7d, containment node 5) .....	64
Figure A 48: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7d, containment node 10) .....	65
Figure A 49: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_7d, containment node 23) .....	66
Figure A 50: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_8, containment node 1) .....	67

Figure A 51: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_8, containment node 3) .....	68
Figure A 52: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_8, containment node 5) .....	69
Figure A 53: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_8, containment node 10) .....	70
Figure A 54: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c1_8, containment node 23) .....	71
Figure A 55: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1, containment node 1) .....	72
Figure A 56: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1, containment node 5) .....	73
Figure A 57: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1, containment node 8) .....	74
Figure A 58: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1, containment node 10) .....	75
Figure A 59: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1, containment node 23) .....	76
Figure A 60: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1a, containment node 1) .....	77
Figure A 61: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1a, containment node 5) .....	78
Figure A 62: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1a, containment node 8) .....	79
Figure A 63: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1a, containment node 10) .....	80
Figure A 64: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_1a, containment node 23) .....	81
Figure A 65: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_2, containment node 1) .....	82
Figure A 66: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_2, containment node 5) .....	83

Figure A 67: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_2, containment node 8) .....	84
Figure A 68: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_2, containment node 10) .....	85
Figure A 69: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_2, containment node 23) .....	86
Figure A 70: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_3, containment node 1) .....	87
Figure A 71: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_3, containment node 5) .....	88
Figure A 72: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_3, containment node 8) .....	89
Figure A 73: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_3, containment node 10) .....	90
Figure A 74: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_3, containment node 23) .....	91
Figure A 75: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_5, containment node 1) .....	92
Figure A 76: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_5, containment node 5) .....	93
Figure A 77: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_5, containment node 8) .....	94
Figure A 78: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c2_5, containment node 10) .....	95
Figure A 79: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1a, containment node 1) .....	96
Figure A 80: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1a, containment node 3) .....	97
Figure A 81: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1a, containment node 5) .....	98
Figure A 82: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1a, containment node 6) .....	99

---

Figure A 83: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1a, containment node 7) .....	100
Figure A 84: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1a, containment node 8) .....	101
Figure A 85: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1a, containment node 10) .....	102
Figure A 86: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1a, containment node 23) .....	103
Figure A 87: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1c, containment node 1).....	104
Figure A 88: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1c, containment node 3).....	105
Figure A 89: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1,c containment node 5).....	106
Figure A 90: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1c, containment node 6).....	107
Figure A 91: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1c, containment node 7).....	108
Figure A 92: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1c, containment node 8).....	109
Figure A 93: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1c, containment node 10).....	110
Figure A 94: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1c, containment node 23).....	111
Figure A 95: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1d, containment node 1) .....	112
Figure A 96: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1d, containment node 3) .....	113
Figure A 97: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1d, containment node 5) .....	114
Figure A 98: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1d, containment node 6) .....	115

---

Figure A 99: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1d, containment node 7) .....	116
Figure A 100: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1d, containment node 8) .....	117
Figure A 101: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1d, containment node 10) .....	118
Figure A 102: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_1d, containment node 23) .....	119
Figure A 103: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_2, containment node 1) .....	120
Figure A 104: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_2, containment node 3) .....	121
Figure A 105: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_2, containment node 5) .....	122
Figure A 106: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_2, containment node 6) .....	123
Figure A 107: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_2, containment node 7) .....	124
Figure A 108: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_2, containment node 8) .....	125
Figure A 109: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_2, containment node 10) .....	126
Figure A 110: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_2, containment node 23) .....	127
Figure A 111: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_4, containment node 1) .....	128
Figure A 112: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_4, containment node 3) .....	129

Case pra2\_c3\_4

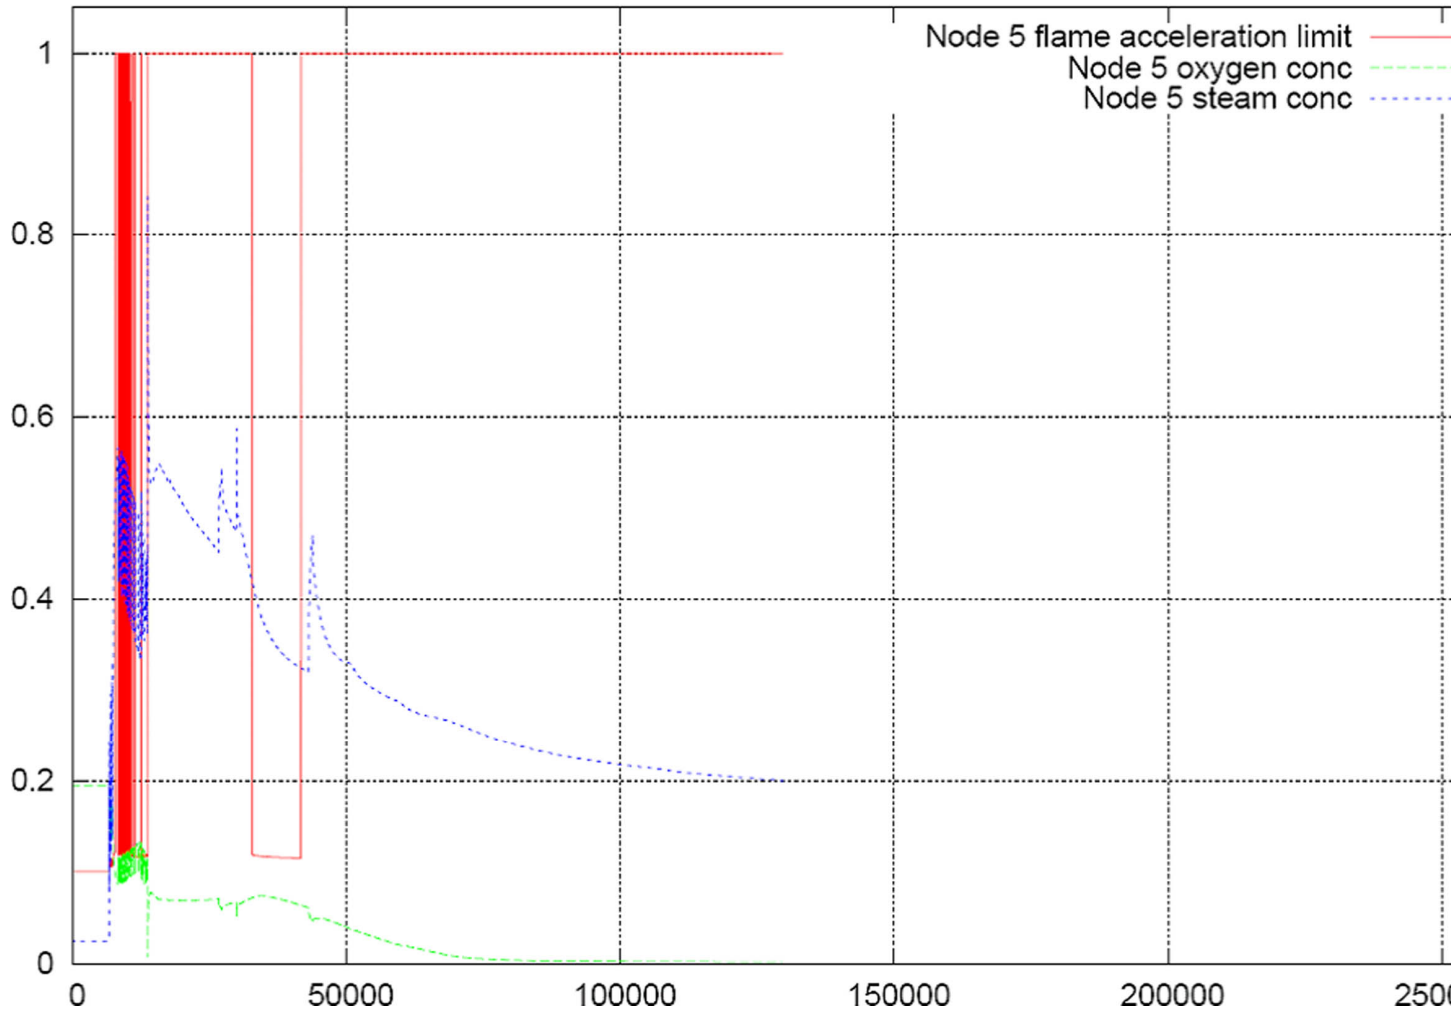

Figure A 113: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3\_4, containment node 5) ..... 130

Figure A 114: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3\_4, containment node 10) ..... 131

Figure A 115: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3\_4, containment node 23) ..... 132

Figure A 116: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3\_6, containment node 1) ..... 133

Figure A 117: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3\_6, containment node 3) ..... 134

Figure A 118: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_6, containment node 5) .....	135
Figure A 119: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_6, containment node 6) .....	136
Figure A 120: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_6, containment node 7) .....	137
Figure A 121: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_6, containment node 8) .....	138
Figure A 122: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_6, containment node 10) .....	139
Figure A 123: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_6, containment node 23) .....	140
Figure A 124: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_7, containment node 1) .....	141
Figure A 125: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_7, containment node 5) .....	142
Figure A 126: Oxygen and steam concentrations (dimensionless) versus time (seconds) cross-plotted with calculated hydrogen concentration limit for flame acceleration (case c3_7, containment node 10) .....	143
