SUBJECT: GE-HITACHI NUCLEAR ENERGY ORGANIZATIONAL CHANGE

In Licensing Topical Report NEDO-11209-04A, Revision 8, GE Nuclear Energy ("GENE"), a component of the General Electric Company (GE), committed to notify the Nuclear Regulatory Commission (NRC) of organizational changes affecting the GENE Quality Program within thirty days of implementation. On June 11, 2007, notification was provided of an organizational change related to the transfer of the GENE business to a new entity, GE-Hitachi Nuclear Energy Americas LLC ("GEH"). This letter provides notice of and describes a recent GEH organizational change.

The following summarizes the organizational and name changes effective June 19, 2008:

A new organization, GEH Fuel Cycle, reporting to the GEH President now has oversight responsibility for several GEH operations related to the uranium fuel cycle, including GEH's new Advanced Programs organization (which includes GEH's Vallecitos operations and Morris operations, the latter previously reporting to the General Manager of GEH Environmental Health & Safety) and GEH's Uranium Management Services. The Vallecitos operations continue to report to the GEH Reactor Facility Safety & Security Vice President, who is also General Manager of the Advanced Programs organization.

The GEH President performs all NEDO-11209-04A related functions performed by the former GENE President, including now those related to the Vallecitos operations and previously performed by the GEH Reactor Facility Safety & Security Vice President.

The attached organization charts illustrate these changes. These organizational changes will be reflected in the next revision of Licensing Topical Report NEDO-11209-04A.

Sincerely,

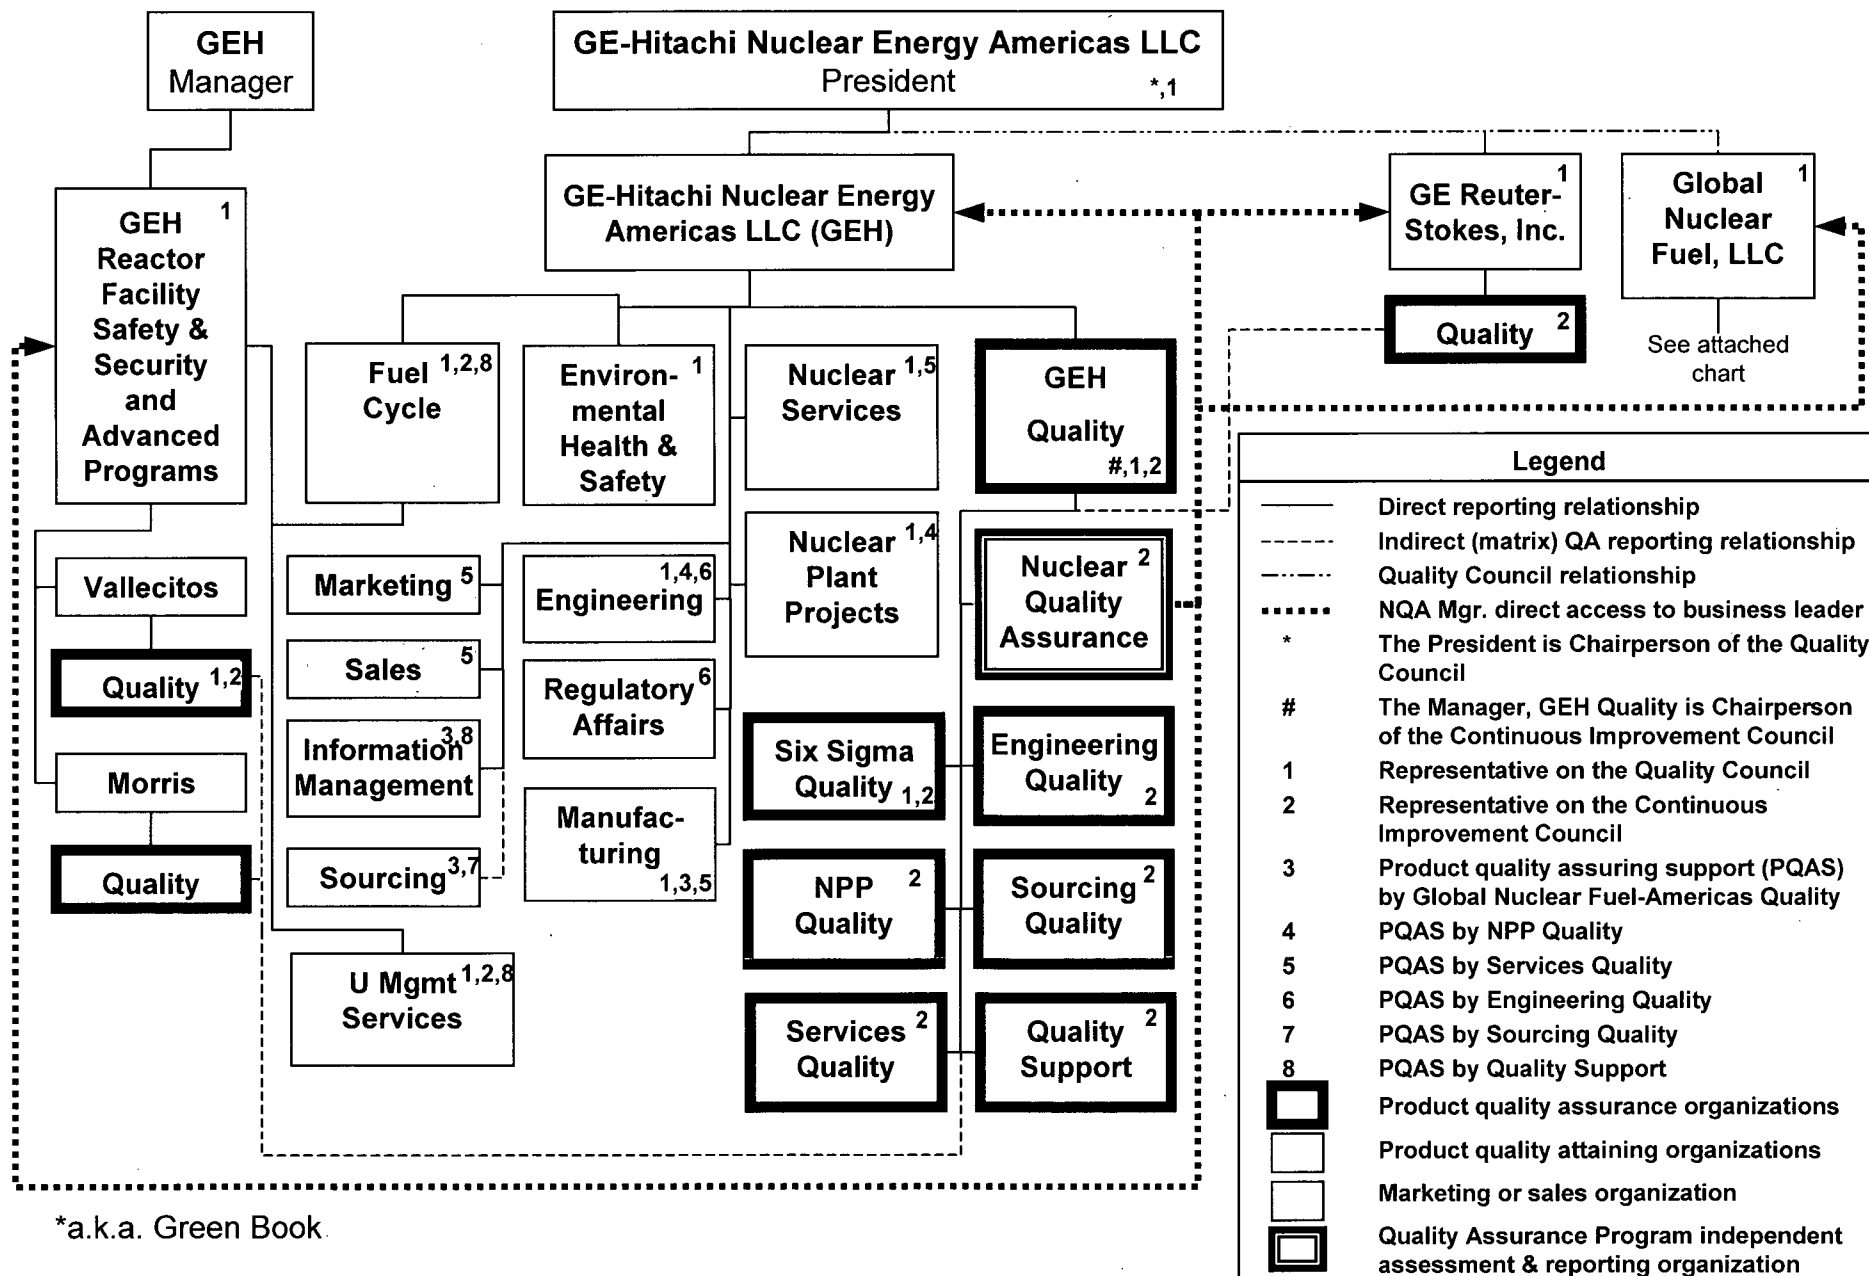

Richard Wittmeier
Quality Manager
