Subject: Shearon Harris site

I am in favor of the proposed reactors at the Shearon Harris site.
It is time that the US wakes up to the fact that cheap oil is a thing of the past.
We need a National plan that gets us off the oil standard. We need to put in place the infrastructure and do the research that will support electric cars and trucks. Research that will give these vehicles a range of 600 miles. The infrastructure that will allow these vehicles to be easily recharged. Maybe "on the go" as they pass recharging stations built along the highway.
Additional non-polluting electric power generating plants will be needed.
We can not rely on BIG OIL to make this change. If this takes something like the Government Manhattan project to accomplish then so be it. We need to make our politicians wake up to the fact that if we don't get off the oil standard our country is destined for decline.
