SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) has issued for public comment a draft guide in the agency's "Regulatory Guide" series. This series was developed to describe and make available to the public such information as methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The draft regulatory guide, entitled, "Containment Performance for Pressure Loads," is temporarily identified by its task number, DG-1203, which should be mentioned in all related correspondence. This guide describes methods that the staff of the NRC considers acceptable for demonstrating containment performance in nuclear power plants, in accordance with regulatory requirements and Commission's performance goals for pressure loadings of containment structures. To meet these objectives, the NRC has developed formal regulatory requirements and has established several performance goals related to evaluating the maximum internal pressure capacity.
