RECEIVED

Dear Mr. O'Reilly:

WATTS BAR NUCLEAR PLANT UNITS 1 AND 2 - IMPROPERLY INSTALLED SUPPORT ANCHORS - WBRD-50-390/81-14, WBRD-50-391/81-13 - FOURTH INTERIM REPORT

The enclosed information concerns a deficiency which was initially reported to NRC-OIE Inspector H. Dance on June 8, 1981 in accordance with 10 CFR 50.55(e) as NCR 3311R. NCR 3311R concerns improperly installed support anchors for the Watts Bar unit 2 reactor building. This is the same type of deficiency and corrective action program as NCR 2789R, which was initially reported to NRC-OIE Inspector M. Thomas on January 7, 1981. NCR 2789R was written for units 1 and 2, and interim reports were submitted on February 6 and June 23, 1981. Since these deficiencies are closely related, TVA has combined both NCR's into one report. A combined third interim report was submitted on July 8, 1981. We expect to submit our next report by September 22, 1981.

The sampling program as outlined in our last report is continuing. We will provide more detailed information in our next report.

If you have any questions, please get in touch with D. L. Lambert at FTS 857-2581.

Very truly yours,

TENNESSEE VALLEY AUTHORITY

L. M. Mills, Manager
Nuclear Regulation and Safety
