Re: Application for Material License, mail control # 2586000

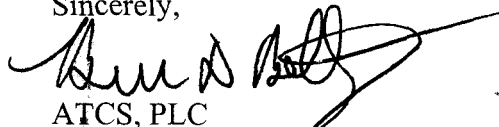

Dear Ms. Bailey,

In response to your phone call of today the following information is supplied for your use in completing our application and issuing our requested license.

1. Type and model number of the gages that ATCS, PLC will be using.
 - ATCS, PLC will be using two types of gages for our current work with the Virginia Department of Transportation; (1) **TROXLER model 3440** surface moisture density gauge & (2) **TROXLER model 4640-B** thin layer asphalt density gauge
2. Use and storage location of the gauges that ATCS, PLC will use under the license.
 - ATCS, PLC will not store the gauges at our office locations. The gauges will be leased and used at temporary construction sites around the State Virginia. They will be stored in Virginia Department of Transportation furnished, locked gauge boxes that have been designed, constructed and approved for that use. At the end of each project the gauges will be returned to the company from which the gauges were leased.

If you have any further questions please feel free to call me at my office at 703.430.7500.

Sincerely,

ATCS, PLC
Bruce D. Boltz, PE
