U.S. Nuclear Regulatory Commission  
Region II  
Attn: Mr. James P. O'Reilly, Regional Administrator  
101 Marietta Street, Suite 3100  
Atlanta, Georgia 30303

Dear Mr. O'Reilly:

WATTS BAR NUCLEAR PLANT UNITS 1 AND 2 - DIESEL GENERATOR ROOM EXHAUST FAN  
MODIFICATION - WBRD-50-390/81-73, WBRD-50-391/81-69 - FOURTH INTERIM  
REPORT

The subject deficiency was initially reported to NRC-OIE Inspector  
R. V. Crlenjak on August 31, 1981 in accordance with 10 CFR 50.55(e)  
as MCR W-51-P. Interim reports were submitted on September 30 and  
December 2, 1981 and February 17, 1982.

TVA is still in the process of evaluating the subject deficiency. Due  
to the extensive coordination required among divisions within TVA and  
the vendor, the estimated time required to determine the actual cause  
of the nonconforming condition and any corrective actions which are  
necessary were underestimated. A more detailed report of the evaluation  
will be submitted on or about July 12, 1982.

If you have any questions, please get in touch with R. H. Shell at  
FTS 858-2688.

Very truly yours,

TENNESSEE VALLEY AUTHORITY

L. M. Mills, Manager  
Nuclear Regulation and Safety
