Atlanta, Georgia 30303

Dear Mr. O'Reilly:

WATTS BAR NUCLEAR PLANT UNITS 1 AND 2 - FULL PENETRATION WELDS FOR PIPE
SUPPORTS - NCR WBN SWP 8007 - SUPPLEMENTAL INFORMATION

The subject deficiency was initially reported to NRC-OIE Inspector
M. Thomas on October 10, 1980 in accordance with 10 CFR 50.55(e).
Our final report was submitted on November 7, 1980.

In that final report, TVA committed to complete modifications associated
with this deficiency by August 1, 1981 for unit 1 and January 5, 1982 for
unit 2. At the time the final report was submitted, those dates repre-
sented hot functional testing for the respective units. Because of the
subsequent delays in the plant construction, these dates were not met. TVA
is now committing that these modifications will be completed before hot
functional testing of each unit. This matter was discussed with Inspector
R. V. Crlenjak on March 11, 1982.

If you have any questions, please get in touch with R. H. Shell at
FTS 858-2688.

Very truly yours,

TENNESSEE VALLEY AUTHORITY
