Subject: NRC amendment request

License No. 06-00854-03
Docket No. 030-01246
Control No. 142532

Dr. Wilcox,

This is reference to your letter dated June 6, 2008. In order to complete my review I will need the following additional information:

1. You requested that the Depleted Uranium (DU) be removed from your license because it is no longer possessed by the hospital. Your license states that the DU was shielding in a linear accelerator. The NRC has become aware of a number of instances where linear accelerators containing DU were transferred to organizations that were not authorized to possess DU. Therefore, please specify who the linear accelerator was transferred to and provide documentation that authorizes their possession of DU.

2. In order to remove Carbon 14 and Calcium 45 from your license, (and to make the decommissioning of the site easier in the future) please specify where these materials were used, provide surveys indicating that no radioactive contamination due to these isotopes is present and verify that you do not possess any of these materials in storage, including waste.

3. Finally, the request to add Dr. Zink as an authorized user of 35.100; 35.200; and 35.300 materials. First, we are not currently authorizing any physicians for all of 35.300 materials, unless they are currently listed on another license for those materials. The reason being is that there are not any materials currently approved for the fourth group (parenteral administration of any other radionuclide, for which a written directive is required). Therefore, Dr. Zink could qualify for 35.392; 35.394; and/or 35.396. Based on the documentation provided [ABR certificate, NRC Form 313A(AUD), and NRC Form 313A(AUT)], Dr. Zink could be listed on the license for 35.100; 35.200; 35.392; and 35.394, if

a. the Second Section of the Form 313A(AUD) was completed and signed by a preceptor listed on an NRC or Agreement State license, and

b. the following sections of the Form 313A(AUT) were complete; (1) Part I, 3.b. and 3.c., indicate the of license number of the supervising individual; (2) Part I, 3.c. indicate the number of cases of oral administration of sodium iodide requiring a written directive, for less than and

greater than 33 millicuries; (3) Part II, First Section complete the attestation for 35.392 and 35.394; and (4) complete Part II, Fifth Section.

I realize this form is complicated, therefore feel free to call me at 610-337-5272 if you should have any additional questions. Please note that you may not reply to this letter by return e-mail. Your reply must be in writing by letter or facsimile (610-337-5269). If we do not receive a reply from you within 30 calendar days from the date of this e-mail, we will assume that you do not wish to pursue your application.
