Atlanta, Georgia 30303

Dear Mr. O'Reilly:

WATTS BAR NUCLEAR PLANT UNITS 1 AND 2 - IMPROPERLY INSTALLED SUPPORT
ANCHORS - WBRD-50-390/81-14, WBRD-50-391/81-13 - ELEVENTH INTERIM REPORT

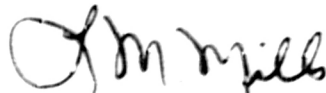

The subject deficiency was initially reported to NRC-OIE Inspector H. Dance on June 8, 1981 in accordance with 10 CFR 50.55(e) as NCR 3311R. NCR 3311R concerns improperly installed support anchors for the Watts Bar unit 2 reactor building. This is the same type of deficiency and corrective action program as NCR 2789R, which was initially reported to NRC-OIE Inspector M. Thomas on January 7, 1981. NCR 2789R was written for units 1 and 2, and interim reports were submitted on February 6 and June 23, 1981. Since these deficiencies are closely related, TVA has combined both NCR's into one report. Combined interim reports were submitted on July 8, August 13, September 27, and November 24, 1981 and January 25, March 30, July 13, and September 8, 1982. We expect to submit our next report on or about February 28, 1983.

TVA has concluded the investigation detailed in our previous reports on these deficiencies. A recommended disposition has been determined for all the cited deficiencies. TVA is evaluating these recommended dispositions. In addition, TVA is evaluating the identified root cause and actions required to prevent recurrence for adequacy. TVA will submit a final report upon conclusion of these evaluations.

If you have any questions, please get in touch with R. H. Shell at FTS 858-2688.

Very truly yours,

TENNESSEE VALLEY AUTHORITY

L. M. Mills, Manager
