Attachments: L32653 CD Line EA-FONSI.doc

A draft environmental assessment is attached for you review. This assessment considers the impact of a new processing line to convert uranium fluoride compounds in sample bottles to more stable chemical forms (oxides and nitrates). The uranium is high-enriched (greater than 20 percent) and will either be returned to DOE or declared surplus and downblended for use in commercial reactor fuel.

We request that you complete your review by August 8, 2008. Please let me know if you have any questions.

Kevin M. Ramsey
