Attn: Mr. James P. O'Reilly, Regional Administrator
101 Marietta Street, NW, Suite 2900
Atlanta, Georgia 30303

Dear Mr. O'Reilly:

WATTS BAR NUCLEAR PLANT UNIT 2 - QUALIFICATION OF EPOXY GROUT FOR
SAFETY-RELATED APPLICATIONS - WBRD-50-391/81-67 - ELEVENTH INTERIM REPORT
FOR UNIT 2

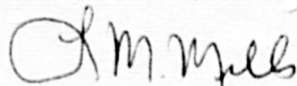

The subject deficiency was initially reported to NRC-OIE Inspector R. V. Crlenjak on August 27, 1981 in accordance with 10 CFR 50.55(e) as NCR 3567R. Interim reports for unit 2 were submitted on September 18 and December 16, 1981; February 11, April 17, June 3, and September 23, 1982; May 26, September 13, and November 23, 1983; and February 1, 1984. Our final report for unit 1 was submitted on September 13, 1983. We expect to submit our next report for unit 2 on or about October 7, 1985.

Due to the engineering support required for the near-term fuel loading of WBN unit 1, a hold has been in effect on unit 2 work. Consequently, no progress has been made on this nonconformance since submission of our previous interim report.

If you have any questions, please get in touch with R. H. Shell at FTS 858-2688.

Very truly yours,

TENNESSEE VALLEY AUTHORITY

L. M. Mills, Manager
Nuclear Licensing
