**Subject:** RE: GGU3: Clarification on Safety Audit Items H-7 & H-21

Tom, due to the number of items on the agenda for tomorrow morning, we have decided to delay this topic until next Tuesday.

**Subject:** Fw: GGU3: Clarification on Safety Audit Items H-7 & H-21

Andrea,

Please see message below regarding hydrology audit need for clarification. I will call you this afternoon to discuss the potential for interaction with the reviewer during tomorrow's biweekly telecon.

Tom

Subject: GGU3: Clarification on Safety Audit Items H-7 & H-21

Tom:

As was discussed on this morning's call with NRC, I am Fwing the following description of our intended approach regarding the response to these audit items for discussion with Chris Cook:

Relative to the description of the process requested by both H-7 (conceptual model of the subsurface environment) and H-21 (development of the radionuclide transport characterization) - we intend to provide a high level description of the process used to develop the conceptual models for the subsurface environment and the model used in the accidental release analysis. We will present an overview of what was done and how, including consideration of the GGU1 investigations and ESP data, supplemented by the COLA investigations. In addition, other alternate models or scenarios considered for the accidental release analysis will be presented and discussed in terms of why the model selected represents a sufficiently

conservative, plausible conceptual model for the GGNS site analysis.

It will be helpful to talk with Chris about the intended approach so that we can provide what is needed. Thanks.
