Atlanta, Georgia 30323

Dear Dr. Grace:

WATTS BAR NUCLEAR PLANT UNIT 2 - REACTOR TRIP BREAKERS DESIGN ERROR  
WBRD-50-391/83-31 - SUPPLEMENT TO FINAL REPORT FOR UNIT 2

The subject deficiency was initially reported to NRC-OIE Inspector Linda Watson on May 5, 1983 in accordance with 10 CFR 50.55(e) as NCR WBN NEB 8305. Our first interim, final, and supplemental information reports for unit 1 and 2 were submitted on June 6, September 26, and December 16, 1983, respectively. Below is our supplement to the final report for unit 2. We consider 10 CFR Part 21 applicable to this deficiency.

As discussed with NRC-OIE Region II Inspector A. Ignatonis on June 4, 1985, the date of April 2, 1984 for completion of corrective actions indicated in our supplemental information report on this matter was not met for unit 2. The unit 1 corrective actions were completed and unit 2 actions were rescheduled. However, because the commitment was reported complete and removed from TVA's tracking system, TVA management was unaware that an NRC commitment date was being rescheduled. The corrective actions on this matter for unit 2 will be completed by December 1, 1985.

If you have any questions, please get in touch with R. H. Shell at FTS 858-2638.

Very truly yours,
