Attention: Dr. J. Nelson Grace, Regional Administrator
101 Marietta Street, NW, Suite 2900
Atlanta, Georgia 30323

Dear Dr. Grace:

WATTS BAR NUCLEAR PLANT UNITS 1 AND 2 - EXTENSION OF SUBMITTAL DATES
WBRD-50-390/84-03,85-41, WBRD-50-391/84-03,85-40

As discussed with Steve Weise on November 7, 1985, two construction deficiency report submittals have been delayed. Peak containment temperature, WBRD-50-390/84-03 and 391/84-03 was originally reported to Inspector C. H. Julian on December 29, 1983 as NCR WBN NEB 8335. In our last report dated April 3, 1985, we stated that Westinghouse was performing test to confirm the conservatism of the present qualification temperature inside containment and that we would provide a report on or about November 15, 1985. Westinghouse has not yet provided us with the final report and has told us that it would not be submitted until early December 1985. Based on this new report date from Westinghouse, we plan to submit our next report to the NRC on or about December 31, 1985.

Auxiliary Feedwater Appendix R Analysis Deficiency, WBRD-50-390/85-41 and 391/84-40 was originally reported to Inspector Al Ignatonis on September 18, 1985 as SCR WBN NEB 8516. In our interim report dated October 21, 1985, we stated that we would provide our next report on or about November 14, 1985. The reanalysis discussed in the interim report has been performed but not yet verified. In order to provide complete information in our next report we requested an extension to allow verification of the reanalysis. We will submit the next report on or about November 29, 1985.
