U.S. Nuclear Regulatory Commission
Attn: Scott Flanders, Director
Division of Site and Environmental Reviews Office of New Reactors
Washington, DC 20555-0001

Dear Mr. Flanders:

Our office participated in a pre-application meeting with AmerenUE on May 22, 2008, regarding potential work activities including wells, water and utility lines, and levee setbacks to serve a potential second nuclear generating unit at AmerenUE's Callaway Plant, in Callaway County, Missouri, in addition to serving their existing nuclear unit. The potential work activities described at the meeting would likely require Department of the Army (DA) authorization under Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act. We have not received an application from AmerenUE to date for the potential work activities; however, we are requesting cooperating agency status for any National Environmental Policy Act documents (Environmental Impact Statements, Environmental Assessments, etc.) that the U.S. Nuclear Regulatory Commission would be the responsible lead Federal agency for preparing. This request is in our anticipation of receiving a DA application from AmerenUE.

If you have any questions concerning this matter, please feel free to write me or to call Mr. Kenny Pointer at 816-389-3833.

Sincerely,

A handwritten signature in cursive script that reads "Gary W. Lenz".

Gary W. Lenz
State Program Manager
