U. S. Nuclear Regulatory Commission  
Washington, DC 20555

**ATTENTION:** Document Control Desk

**SUBJECT:** Calvert Cliffs Nuclear Power Plant  
Unit Nos. 1 & 2; Docket Nos. 50-317 & 50-318  
License Amendment Request: Application for Technical Specification Change  
TSTF-491, Removal of the Main Steam and Main Feedwater Valve Isolation  
Time from Technical Specifications Using Consolidated Line Item Improvement  
Process

---

**REFERENCE:** (a) 71 FR 78472, dated December 29, 2006, Technical Specification  
Improvement to Remove the Main Steam and Main Feedwater Valve  
Isolation Time from Technical Specifications Using the Consolidated Line  
Item Improvement Process

Pursuant to 10 CFR 50.90, Calvert Cliffs Nuclear Power Plant, Inc. hereby requests an amendment to Renewed Operating License Nos. DPR-53 and DPR-69 to modify Technical Specification requirements by removing the specific isolation times for the main steam isolation valves from the associated Technical Specification Surveillance Requirements. This proposed amendment request is based on the Nuclear Regulatory Commission staff's model application described in Reference (a). We are adopting only the main steam isolation valve portion of Technical Specification Task Force-491 because the isolation times for the feedwater isolation valves are already incorporated into the Inservice Testing Program as described in Technical Specification Surveillance Requirement 3.7.15.1.

Attachment (1) provides a description of the proposed change, the requested confirmation of applicability and plant specific regulatory commitments. Attachment (2) provides the marked up Technical Specification pages. Attachment (3) provides the marked-up Technical Specification Bases pages for information only.

**Safety Committee Review**

The Plant Operations Review Committee has reviewed the proposed change and concurs that operation with the proposed change will not result in an undue risk to the health and safety of the public.
