## Your source for science you can use

As an unbiased, multi-disciplinary science organization that focuses on [biology](#), [geography](#), [geology](#), [geospatial information](#), and [water](#), we are dedicated to the timely, relevant, and impartial study of the landscape, our natural resources, and the natural hazards that threaten us.

### Science Topics

[Browse Science Topics](#) **GO**

A tool for browsing USGS science programs and activities.

#### Sample topic:

**Field experiments**  
Deliberate arrangement of objects and events in the field to observe the behavioral response of natural systems or organisms

#### Featured Topics

**Mercury Rises as a Hot Science Topic**  
USGS scientists work to improve information on mercury sources, cycling, and toxicity, which will help land and resource managers understand what can be done to reduce mercury hazards to people and the environment. The large geographic scope and consequences of mercury contamination and enormous complexity of the problem require a scientific approach that integrates many scientific disciplines. [Learn More](#)

The large geographic scope and consequences of mercury contamination and enormous complexity of the problem require a scientific approach that integrates many scientific disciplines. [Learn More](#)

**USGS Science at Ecological Society of America**  
Invasive species, wildlife disease, and the effect of hurricanes on ecosystems are among the many and diverse issues that

### Science In Your Backyard
