**Subject:** NRC proposed changes to SUA--1341, LA 13

Tom:

After internal review of the proposed License Amendment 13, we have determined the following license conditions should be modified to reflect the timeliness in decommissioning as stated in 10 CFR 40.42, and restoration standards that are reflective of those found in 10 CFR 40, Appendix A, Criterion 5B(5). We are proposing the following changes to the license 13. This is addition to the other minor changes we have previously discussed and to which COGEMA has agreed. Please let me know if COGEMA agrees to these changes.

Ron

License Condition 9.3: The licensee shall conduct operations in accordance with the commitments, representations, and statements contained in the January 5, 1996, license renewal application submittal as revised by the September 3, 1997, "Responses to NRC Comments on the License Renewal Application for Source Materials License SUA-1341," and as supplemented by the December 13, 1996, submittal, requesting a performance based license condition for approval of the startup of new well fields, including standard operating procedures, and hereinafter referred to as the "approved license application." The approved license application is hereby incorporated by reference except where superseded by license conditions below.

The land and structures will be decommissioned according to the Decommissioning Plan submitted December 19, 2000, as revised by submittals dated June 15, June 18, and August 31, 2001 **and in accordance with 10 CFR 40.42**. Whenever the word "will" is used in the above referenced documents, it shall denote a requirement."

License Condition 10.16: The licensee shall conduct ground water restoration and post-restoration monitoring as described in Section 6.1 of the approved license application. The primary goal of restoration shall be to return the ground water quality, on a production-unit average, to baseline concentrations on a parameter-by-parameter basis. If the primary goal cannot be achieved, the ground water will, at a minimum, be returned to **an alternate standard approved by the NRC**, ~~the pre-mining use category~~.

Changes to ground water restoration or post-restoration monitoring plans shall be submitted to the NRC for review and approval at least 2 months prior to ground water restoration in a mining unit."
