DEAR MR.MILLER

Aug 28 2008

You recently responded to me concerning a couple of documents that I sent the Nuclear Regulatory Commission. I replied by saying for you to not make them public.

I have revised the documents and have attached them to this email. You can make these public so anyone who is interested can help me build the prototype. But I understand we will have to have waste site like SRS to do the actual test readings and dispose of the tank according to their procedures after the test.
