NUCLEAR REGULATORY COMMISSION
OFFICE OF INSPECTION AND ENFORCEMENT
WASHINGTON D.C. 20555

June 1, 1984

IE INFORMATION NOTICE NO. 84-41: IGSCC IN BWR PLANTS

Addresses:

All boiling water power reactor facilities holding an operating license (OL) or construction permit (CP).

Purpose:

This notice is being issued to provide information on further significant IGSCC indications found in piping systems of boiling water reactors as a result of expanded inspection efforts not included within the scope of current augmented inservice inspection requirements. The inspections cited in this notice do not constitute new NRC requirements. The Nuclear Regulatory Commission (NRC) staff is reviewing this information and its safety significance. If the evaluation so indicates, the NRC may require further licensee action. In the interim, recipients are expected to review their facility's status and consider nondestructive examination (NDE), as appropriate, to assess potential degradation of such piping welds during their ISI activities or planned piping replacement programs. No specific action or written response is required at this time.

Description of Circumstances:

Pilgrim Station is presently shutdown for replacement of primary recirculation piping systems and further ISI activities. Following piping removal, a dye penetrant test (PT) conducted on the exposed ID surfaces of the reactor vessel nozzle welds disclosed a number of axially oriented crack indications in the Inconel 182 weld butter which joins the 28-inch diameter piping safe end to reactor vessel nozzle in the "B" loop (Ref. figure 1). No evidence of cracking was observed in the "A" loop nozzle weld. Metallurgical evaluation of boat samples and surface replicas of the cracks is being conducted by General Electric for the licensee to determine the nature of the indications. Preliminary metallography results confirm the cracking to be IGSCC. Axial cracking of a similar nature was also found in three of the 10 Inconel 182 weld butters joining the 12 inch diameter jet pump inlet riser safe ends to the reactor vessel nozzles.

The Monticello plant has been shut down since February 3, 1984 for refueling and replacement of recirculation system piping due to IGSCC. During a routine inservice inspection on February 18, 1984, ultrasonic examination identified several cracks in a 4 x 8 inch reducer weld on the 'A' Loop jet pump instrument seal line at the reactor vessel nozzle. The cracks were located in the 8-inch

8406010423

ADR
Q
ADCK 05000003
940601

diameter weld HAZ, were axially oriented, and appeared to be about 40 per cent through wall. The reducer is reportedly made of high carbon stainless steel. This is the first cracking incident found in this particular line which is non-isolable (PNO-III-84-17). The licensee is planning to replace the reducer assemblies on the jet pump instrument seal lines of both A & B Loops (PNO-III-84-17A).

Browns Ferry Unit 3 has been shutdown since September, 1983 for refueling, torus modifications, and inservice inspection. A visual examination of the two 4-inch diameter jet pump instrument line nozzle welds disclosed two pinhole leaks at the safe end to reducer weld (Ref. figure 2). Ultrasonic examination (UT) further revealed extensive axial cracks in the stainless steel safe end side of this weld on both instrument lines. The cracks were found distributed 360° around the safe ends. Based on UT measurements, the cracks were estimated to range upward to 2 inches in length and having depth, in some cases, of .280 inches of the full .340 inch wall thickness.

No written response to this information notice is required. If there are any questions regarding this matter, please contact the Regional Administrator of the appropriate NRC regional office or this office.

Edward L. Jordan, Director
Division of Emergency Preparedness
and Engineering Response
Office of Inspection and Enforcement
