16.0 INTRODUCTION

This chapter of the U.S. EPR FSAR is incorporated by reference with the following departures and/or supplements.

The U.S. EPR FSAR includes the following COL Item in Section 16.0:

A COL applicant that references the U.S. EPR design certification will replace preliminary information provided in brackets of the Technical Specifications and Technical Specification Bases with plant specific values.

This COL Item is addressed as follows:

The Technical Specifications and Technical Specification Bases are provided in Part 4 of this COL application.

The generic Technical Specifications and Bases in Chapter 16 of the U.S. EPR FSAR are not incorporated by reference in this FSAR. However, the U.S. EPR generic Technical Specifications and Bases are used to develop the Technical Specifications and Bases provided in Part 4 of the COL application.

Supplements to the generic Technical Specifications and Bases include replacing preliminary information provided in brackets of the Technical Specifications and Bases with plant-specific values and information (as identified in the COL item in Section 16.0 of the U.S. EPR FSAR) and addressing and removing reviewers notes. Departures from the generic Technical Specifications and Bases include the use of a Setpoint Control Program, correction of errors regarding Limiting Trip Setpoints, and inclusion of site-specific material to address Reviewer's Notes that were not bracketed in the generic U.S. EPR Technical Specifications. The justifications for these departures and supplements are provided in Part 4 of this COL application.
