**Re: Production of Southern Nuclear's Eleventh Supplemental Disclosures
Docket No. 52-011-ESP**

Dear Mr. Moulding:

As you requested during our telephone conversation, enclosed is a CD containing the documents disclosed in Southern Nuclear's Eleventh Supplemental Disclosures of August 6, 2008. Also enclosed is an attachment that includes updated document descriptions and the beginning and ending bates number references of the documents being provided.

As previously discussed, we have redacted out certain portions of some of the attached documents that we deemed either not relevant to the admitted contentions or subject to attorney-client/work product protections. To the extent any of the documents produced herein relate to attorney-client communications or related work product, the production of the attached documents shall not be deemed a waiver of any attorney-client/work product protections or the stipulations agreed to in the ASLB's April 3, 2007 order.

If you have any questions regarding the enclosed documents, please contact me.

Sincerely,

K.C. Hairston

KCH/dkf

Matt,

Returning from the site...sampling went well. About 14 fish and 3 freshwater crayfish for the 24 hour event. Will be prepared for the NRC visit on 11 Aug ... Please keep me posted with any last minute details per date, timing, etc.

Subject: equipment tags

D'Andre and Kevin,

We completed another round of aquatic sampling at the intake structure during Mon – Wed this week. The sampling went very smoothly.

We noticed that our equipment I.D. tag for our “bundle” of (tarp covered) entrainment sampling equipment located down at the edge of the canal is missing. Can one of you please arrange to have that equipment “bundle” re-tagged?

Other tags, previously placed on gear in the covered space at the intake structure are still intact.

Expect to see a summary of this week's trip report soon.

Thank you and please contact me if you have any questions.

Tony:

We will be able to start on the samples you are sending us as soon as they arrive. We will have the sorters do counts of eggs and larvae as they are sorting, prior to the identification process. I will send you these raw counts as soon as they are available. Assuming we will be getting about 14 samples, my lab people say they can turn them around in about 4 days.

Paul,

Hope all is well.

Based on communication with Hannah, we expect to receive the first batch of sample results around 25 August. I received Hannah's message indicating that she began her vacation today. I have a question that I hope you can help with.

In the mean time, we're trying to get a handle on whether to schedule continued sampling through August. To make that determination, we need to at least see draft/preliminary information in the form of a simple summary of total larval fish abundance per sampling event (based on samples you have processed to date). Also, I will be sending the most recent sample collection to you next week. We are most interested to learn if your lab can also provide us with an expedited sort and count to yield at least a preliminary total larval fish count for that sample to see if we can discern the end of the peak pulse.

Thanks,

Tony,

Set#1 data, coming to you on July 25 will include data through June 25th (rather than June 12th), which seems a more helpful cut off point.

I will strive to submit Set#2 (July data) by the end of August; and will keep you posted after we receive the August 5 delivery. Hope that will help.

Hannah

If we are still performing the ichthyoplankton component of our study the NRC will want to observe. The NRC has requested a boat tour of the Savannah in the vicinity of the site so we should already have a boat available for them to ride on.

I'll let you know more details as soon as I get them.

Thanks,

Subject: RE: NRC audit

Matt,

Currently, our schedule is set to sample during 12-15 August. We would be happy to adjust the schedule to sample during 11-13 August, if you desire. Do you know if NRC wishes to observe all aspects of sampling including impingement, entrainment, and source water ichthyoplankton sampling? I ask this because a second boat may be warranted if NRC wishes to observe the boat-based sampling components as space on our work boat is very limited. We could reasonably accommodate up to two guests in our boat if we know that's all that are coming to observe.

Please let me know if I need to plan for an additional boat and boat operator on-site to accommodate.

Subject: NRC audit

Tony,

NRC staff have asked that we demonstrate our impingement sampling at Plant Vogtle when they come for their New and Significant audit in August. The audit is scheduled to take place August 11-15. We should find our in the next day or two when the NRC staff would like to see the sampling but my best guess would be the afternoon of Monday Aug 11 during the site tour. Will you be available that week to demonstrate (or better yet actually perform) impingement sampling that week?

Thanks!

Tony Dodd and Tom Broadwell of GPC Environmental Field Services will be performing aquatic impingement and entrainment sampling at the Plant Vogtle water intake structure and on the Savannah River next week, Mon-Tues, (28-29 July). We will be working in the area on a sampling schedule requiring 6-hr sampling intervals through night and day hours for approximately 48 hours and are requesting that Gate 12 and the entrance gate to the intake building remain open during that time. We will contact the on-shift Unit 2 Operator periodically during the event to ask for assistance to have the traveling screens at the intake structure rotated on three instances during the study (0830 HRS and 2030 HRS on TUE and 0830 HRS on WED). Kevin Walden and D'Andre Manigo are our team onsite contacts. Please include this activity in the POD for 28-30 July.

Our thanks go out to all personnel who have been of assistance to this important sampling program to date.

Thanks for your help in advance for this next sampling effort. Please contact us if you have any questions.

Subject: NRC site visit

Tony, if at all possible, will you be available Monday, Aug 11 to demonstrate our impingement and entrainment sampling procedures to the NRC? What I had in mind was a screen run with the net in place, a short demonstration of our intake entrainment sampling (pumping) and a description of the source water sampling. We are still working on a time, but it will either be around 9AM or 1PM that Monday.

Thoughts?

Subject: RE: NRC audit

If we are still performing the ichthyoplankton component of our study the NRC will want to observe. The NRC has requested a boat tour of the Savannah in the vicinity of the site so we should already have a boat available for them to ride on.

I'll let you know more details as soon as I get them.

Thanks,

Matthew T. Montz

Subject: RE: NRC audit

Matt,

Currently, our schedule is set to sample during 12-15 August. We would be happy to adjust the schedule to sample during 11-13 August, if you desire. Do you know if NRC wishes to observe all aspects of sampling including impingement, entrainment, and source water ichthyoplankton sampling? I ask this because a second boat may be warranted if NRC wishes to observe the boat-based sampling components as space on our work boat is very limited. We could reasonably accommodate up to two guests in our boat if we know that's all that are coming to observe.

Please let me know if I need to plan for an additional boat and boat operator on-site to accommodate.

Subject: NRC audit

Tony,

NRC staff have asked that we demonstrate our impingement sampling at Plant Vogtle when they come for their New and Significant audit in August. The audit is scheduled to take place August 11-15. We should find our in the next day or two when the NRC staff would like to see the sampling but my best guess would be the afternoon of Monday Aug 11 during the site tour. Will you be available that week to demonstrate (or better yet actually perform) impingement sampling that week?

Thanks!

From speaking to Hannah, who just ran out the door on her way to England, you will be receiving on Aug 25 all the data for all the samples we have received to date (not counting those you are about to send). Is that what you are looking for?

Paul

Paul,

That's great news. Can you also send us the "raw" totals (enumerations only) per sample event for the previously processed samples that are in QA/QC at the same time?

Tony:

We will be able to start on the samples you are sending us as soon as they arrive. We will have the sorters do counts of eggs and larvae as

they are sorting, prior to the identification process. I will send you these raw counts as soon as they are available. Assuming we will be getting about 14 samples, my lab people say they can turn them around in about 4 days.

Paul,

Hope all is well.

Based on communication with Hannah, we expect to receive the first batch of sample results around 25 August. I received Hannah's message indicating that she began her vacation today. I have a question that I hope you can help with.

In the mean time, we're trying to get a handle on whether to schedule continued sampling through August. To make that determination, we need to at least see draft/preliminary information in the form of a simple summary of total larval fish abundance per sampling event (based on samples you have processed to date). Also, I will be sending the most recent sample collection to you next week. We are most interested to learn if your lab can also provide us with an expedited sort and count to yield at least a preliminary total larval fish count for that sample to see if we can discern the end of the peak pulse.

Thanks,

Tony,

I will be out of the office from Thursday July 17th (tomorrow) through August 4th. We will be sending Set#1 data (3/11/08 through 6/25/08) to you by August 25th. If you have any questions during my absence, or in response to the data delivered, please feel free to contact Paul Geoghegan.

Thanks, Hannah

Tony,

Set#1 data, coming to you on July 25 will include data through June 25th (rather than June 12th), which seems a more helpful cut off point.

I will strive to submit Set#2 (July data) by the end of August; and will keep you posted after we receive the August 5 delivery. Hope that will help.

Hannah

Tony,

I'll certainly do what I can. If you could peg the dates that we can expect the July samples in our hands, I can give you a more definitive answer.
