Mail Control No. 141687

Dear Mr. Lanka:

A review of the above documents has revealed some deficiencies in the information provided. Please send revised documents containing the addition information.

1. Please send an original copy of the Certification of Financial Assurance. The new certification should include a list of the radioisotopes possessed which have a half-life exceeding 120 days, the form of each, and the activity of each. The certification should include the original signature with person's title, the date signed, and the university seal.

2. Please send an original copy of the Statement of Intent. This should include a reference to New Jersey state law 18A:646-6(l) which authorizes the university Board to spend money for this purpose, as well as a description of the Newark Campus cited in the current Statement of Intent. Does this include all locations of use listed on the license? Are there any other locations? Please conclude the Statement of Intent with the original signature with title, the date, and the university seal.

Please send these documents to my attention at U. S. Nuclear Regulatory Commission, 475 Allendale Road, King of Prussia, PA 19406. Please reference Control No. 141687 in your correspondence. If you have any questions, please call me at (610)337-5102.

Richard McKinley  
US NRC, R1
