Subject: Exit Meeting

(NOTE: This will be used as the
Documents Title in ADAMS)

Summary: 9/15 16:00 I left a message on Mr. McNally's voice-mail for him to get back in touch with me so that I could conduct an exit meeting.

9/16 09:10 Mr. McNally returned my call. I informed him that I had performed inspections at the Princeton and Sewell, NJ facilities and that the intended inspection at the Princeton Junction, NJ facility would not occur. There were two issues for the licensee to follow up on but were not safety related. Both involved the Princeton facility. The nuclear medicine technologist (NMT) works for multiple licensees and the licensee should keep track of the radiation exposure received *in toto*. This may be occurring on an informal basis as the medical physicist provides services for both the hospital and the licensee. The second issue involves the NMT performing radiological surveys with the red cap on the Geiger Mueller counter. The thick red cap is designed to protect the instrument when in storage or while being transported to another location. The use of the instrument with the red cap on decreases the efficiency of the instrument. Mr. McNally stated that the licensee would look into these issues and correct them. I ended the meeting informing Mr. McNally that an NRC Form 591 would be issued from the Region I office indicating that no items of noncompliance were identified. A copy of the form should be sent to each of their facilities in New Jersey.
