John

Attached are Amy Boyle's technical comments on the Geology and Hydrology (Appendices D5 and D6 respectively) portions of the LC Permit Application. Hard copies will follow. Please note Comment #19 regarding the DE horizon. It suggests that additional monitoring wells may be needed for the DE horizon. Since you have personnel in the field with drill rigs this season, we wanted you to have a heads up on this, in the event that you might want to install some additional wells this season.

Melissa

P.S. Our technical comments on the remainder of the application will be forthcoming.
