**(FINAL: FELLOW ACTIVITIES REPORT)**

**To:** Apostolakis, Bonaca, Larkins, Bahadur, Savio, Larson  
**From:** August W. Cronenberg, ACRS Senior Fellow  
**Subject:** 2nd Quarter FY-2002 Fellow Activities Report (Final)

Attached is an updated "table-of-activities" which summarizes my ACRS fellow efforts to date, including efforts this quarter. All primary activities are listed since my joining ACRS in June-95. Efforts this quarter (at ½-time FTE) include:

**Activities Current Quarter**

**Report-AWC-101.2002:** Final report, *Assessment of the Power Uprate Application and Review Process for PWRs: Farley Case Study*. This investigation stems from ACRS concerns regarding safety implications of significant PWR uprates and adequacy of methods to support such uprates. The report centers on an evaluation of the 1997 4.6-% uprate for the Joseph Farley-PWR plant, which the staff has indicated will be the *template* for review of future PWR uprates. Results indicate that the Farley uprate application largely adheres to guidance outlined in the 1983 Westinghouse uprate topical report for PWRs, WCAP-10263, with little new information or methodologies than used previously for limited PWR uprates. Several notable improvements were evident from examination of the Farley-SER, specifically a more detailed discussion of staff review considerations of licensee submittal analysis, and staff audit estimates of reactor vessel integrity and radiological consequences. Nevertheless, this reviewer is not drawn to the conclusion that the Farley uprate provides an adequate *template* for review and approval of significant PWR uprates.

**Memo-AWC-102.2002:** *Observations Noted from Examination of the Farley-PWR 4.6-% Power Uprate: Staff Template for Review of PWR Uprates*. This memo briefly summarizes observations noted from the above study; the purpose being to provide ACRS and the T-H subcommittee, with an advance indication of principal observations in support of its current review of the ANO-2-PWR 7.5-% uprate.

**Memo-AWC-103.2002:** *Estimated Efforts for Closure of ACRS Project on Margin Impact Estimates for Multiple Licensing Actions*. This memo presents a "closure plan" regarding efforts at evaluation of the margin impact for plants requesting multiple licensing actions, specifically power uprates, license renewal, and extended fuel cycle to higher burnup. The plan was developed for benefit of a *replacement ACRS-Fellow*.

**Memo-AWC-104.2002:** DRAFT *Margins* paper for PSA-2002 conference, Detroit (Oct. 6-10/02). Draft paper incorporates significant manuscript changes stemming from comments received from the Hatch Licensee (Southern Nuclear Co.) and NRR.
