Subject: Uranium Recovery GEIS

Dear Mr. Park,

The NRC should follow the National Environmental Policy Act by running individual environmental impact statements for all proposed in situ uranium mines. The people in communities in potentially impacted areas should have the full benefit of the individual attention the NRC should be giving when considering something as potentially dangerous as in situ uranium mines.

No one size fits all when it comes to uranium mining from one end of the country to another. The NRC should conduct individual assessments of the impacted areas to ensure that the environmental risks in each one are taken into consideration. Only that would spotlight potential problems in particular areas which, if overlooked, could well lead to devastating impacts on human life in the area.

Thank you,

Robert Silk
