2007

2007 Population Estimates

The Population Estimates Program prepares estimates of the total population; estimates of the population by age, sex, race, and Hispanic origin; and estimates of the number of housing units. The 2007 population estimates start with a base population for April 1, 2000 and calculate population estimates for July 1 for years 2000 to 2007. The population estimates use a variety of administrative records data to measure the population change including data on births, deaths, migration, and housing units.

Note: Data for 2007 have been released for the United States, Regions, Divisions, States, Counties, Puerto Rico Commonwealth and Municipios by age, sex, race and Hispanic origin. Data have also been released for the population of Cities/Towns. These data supersede population estimates published in previous years.

2006

2006 Population Estimates

The Population Estimates Program prepares estimates of the total population; estimates of the population by age, sex, race, and Hispanic origin; and estimates of the number of housing units. The 2006 population estimates start with a base population for April 1, 2000 and calculate population estimates for July 1 for years 2000 to 2006. The population estimates use a variety of administrative records data to measure the population change including data on births, deaths, migration, and housing units.

Note: For the most current population and Housing unit estimates see the 2007 data.
