Application Section: 13.3

QUESTIONS for Licensing and Inspection Branch (NSIR/DPR/LIB (EP))

13.03-2

DCD-1: Subject: Habitability

[Basis: 10 CFR 50.47(b)(8), NUREG-0696 Section 2.6]

1) Please describe the capability of the MCR to accommodate the transfer of the TSC plant management function from the TSC, if the TSC becomes uninhabitable.

2) Please identify the impact on the MCR due to the TSC plant management function. Would the increased access and egress impact the assumed unfiltered air in leakage used in the design basis analysis? Has space been identified for this function to be set up and implemented? Are there sufficient materials (plant records, drawings, procedures, etc.) and communication established in the MCR for this purpose?
