Dear Ms. Sterdis:

By letter dated October 30, 2007, as supplemented by letters dated November 2, 2007, January 8, 2008 and January 14, 2008, Tennessee Valley Authority (TVA) submitted its application to the U. S. Nuclear Regulatory Commission (NRC) for a combined license (COL) for two AP1000 advance passive pressurized water reactors pursuant to 10 CFR Part 52. The NRC staff is performing a detailed review of this application to enable the staff to reach a conclusion on the safety of the proposed application.

The NRC staff has identified that additional information is needed to continue portions of the review. The staff's request for additional information (RAI) is contained in the enclosure to this letter.

To support the review schedule, you are requested to respond within 30 days of the date of this letter. If changes are needed to the final safety analysis report, the staff requests that the RAI response include the proposed wording changes.

If you have any questions or comments concerning this matter, you may contact me at 301-415-1132.

Sincerely,

/RA/

QUESTIONS for Siting and Accident Conseq Branch (RSAC)

02.03.04-6

The NRC staff is attempting to correlate the meteorological data provided in the ARCON96 computer code format with the joint frequency distribution data (JFD) provided for use with the PAVAN and XOQDOQ computer codes. Were the two data sets derived independently of each other from a single set of raw data or were the ARCON96 formatted data used to generate the JFD data? For both data sets, provide examples of how each value was rounded or truncated to determine into which wind speed category it should be assigned.
