

DE Radiological Emergency Plan

Section 11.16

Rev 7 November 2005

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
REGION I  
475 ALLENDALE ROAD  
KING OF PRUSSIA, PENNSYLVANIA 19406-1415

June 30, 1994

John P. Mulhern  
Acting Director  
Delaware Emergency Management Agency  
P.O. Box 527  
Delaware City, Delaware 19706

Dear Mr. Mulhern:

We have received your letter forwarding Kevin Kille's signed protocol agreement for observation of NRC inspections at the Salem and Hope Creek Generating Stations. We look forward to working with Mr. Kille on issues involving Delaware's emergency plans and NRC inspection activities.

Our State Liaison Officer, David Chawaga and Mr. Kille recently discussed the protocol and the basic structure of the NRC's inspection program. During those telephone conversations, Mr. Chawaga invited Mr. Kille and other interested members of your staff to visit our NRC Region I office in King of Prussia, PA. During this visit we would provide a tour of our regional Incident Response Center, laboratories, and general office areas. We would include the opportunity for your personnel to talk with NRC staff members from each functional area of NRC responsibility. The visit would mutually benefit our agencies by providing staff members with an early opportunity to meet. We understand that Dr. Harry Otto, Delaware's liaison to NRC and Dr. Ramney Koul from the Delaware Department of Public Health may be interested in attending the visit to our office.

If you have any questions or comments regarding these combined initiatives, please contact me at (610) 337-5299 or David Chawaga at (610) 337-5246.

Sincerely,

A handwritten signature in black ink, appearing to read "Thomas T. Martin".

Thomas T. Martin  
Regional Administrator

Enclosure

2

- The State will be responsible for determining the technical and professional competence of its representatives who accompany NRC inspectors.
- An observer's communication with the licensee will be through the appropriate NRC team member, usually the senior resident inspector or the team leader.
- When informed of an unannounced inspection, a State must not release information concerning its time and purpose.
- An observer will remain in the company of NRC personnel throughout the course of the inspection.
- State observation may be terminated by the NRC if the observer's conduct interferes with a fair and orderly inspection.
- An observer will not be provided with proprietary or safeguards information. Observers will not remove any material from the site without NRC or licensee approval.
- The State observer, in accompanying the NRC inspectors, does so at his or her own risk. NRC will not be responsible for injuries or exposures to harmful substances which may occur to the accompanying individual during the inspection and will assume no liability for any incidents associated with the accompaniment.
- The State observer will be expected to adhere to the same standards of conduct as NRC inspectors during an inspection accompaniment.
- If the State observer notices any apparent non-conformance with safety or regulatory requirements during the inspection, he/she will make those observations promptly known to the NRC team leader or lead inspector. Likewise, when overall conclusions or views of the State observer are substantially different from those of the NRC inspectors, the State will advise the team leader or lead inspector and forward those views, in writing, to the NRC Region. This will allow NRC to take any necessary regulatory actions.
- Under no circumstances should State communications regarding these inspections be released to the public or the licensee before they are reviewed by the NRC and the inspection report is issued. State communications may be made publicly available, similar to NRC inspection reports, after they have been transmitted to and reviewed by NRC.

Enclosure

Adjacent State Protocol:

- An adjacent State is a State within the plume exposure pathway emergency planning zone (EPZ) (within approximately a 10-mile radius) of an NRC-licensed facility located in another State. A host State is a State in which an NRC-licensed facility is located. An adjacent State may request permission to observe NRC inspections at an NRC-licensed facility in a host State.
- The adjacent State SLO must communicate his/her request for observation to the Regional Administrator for the Region in which the facility is located.
- The adjacent State SLO must also communicate his/her request to the host State SLO so that each State is aware of the other's intentions.
- If a host State and an adjacent State request observation of the same inspection, the Regional Administrator will make the final determination on the number of State observers who may attend the inspection. If there is a need to limit the number of observers, the Regional Administrator will routinely give preference to the host State observers.
- Adjacent State observers will abide by the same protocol in all aspects of the inspection as host States under this agreement.

Signature of State Observer

15 JUNE 1999  
Date
