SUBJECT

Follow-Up to film badge reading of 1000 rads

SUMMARY

The inspector asked for an update on WeldSonics' follow up of a 1000 rads film badge reading.

WeldSonics had not provided its written response to the issue because it was waiting to receive Landauer's report of the results of its independent review of the badge, which is due today. Based on WeldSonics' discussion with Landauer regarding Landauer's work on the badge, WeldSonics determined that no individual received a radiation dose in excess of regulatory limits. WeldSonics determined that the individual who should have worn the badge actually received 274 millirem. WeldSonics committed to send John Madera a copy of the results of its follow up on the issue, including the basis for its estimated dose to the individual, no later than 12/25/08.

ACTION REQUIRED

Place in ADAMS.

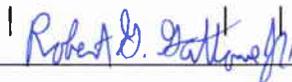

cc: John Madera, Geoff Warren, Jim Lynch
