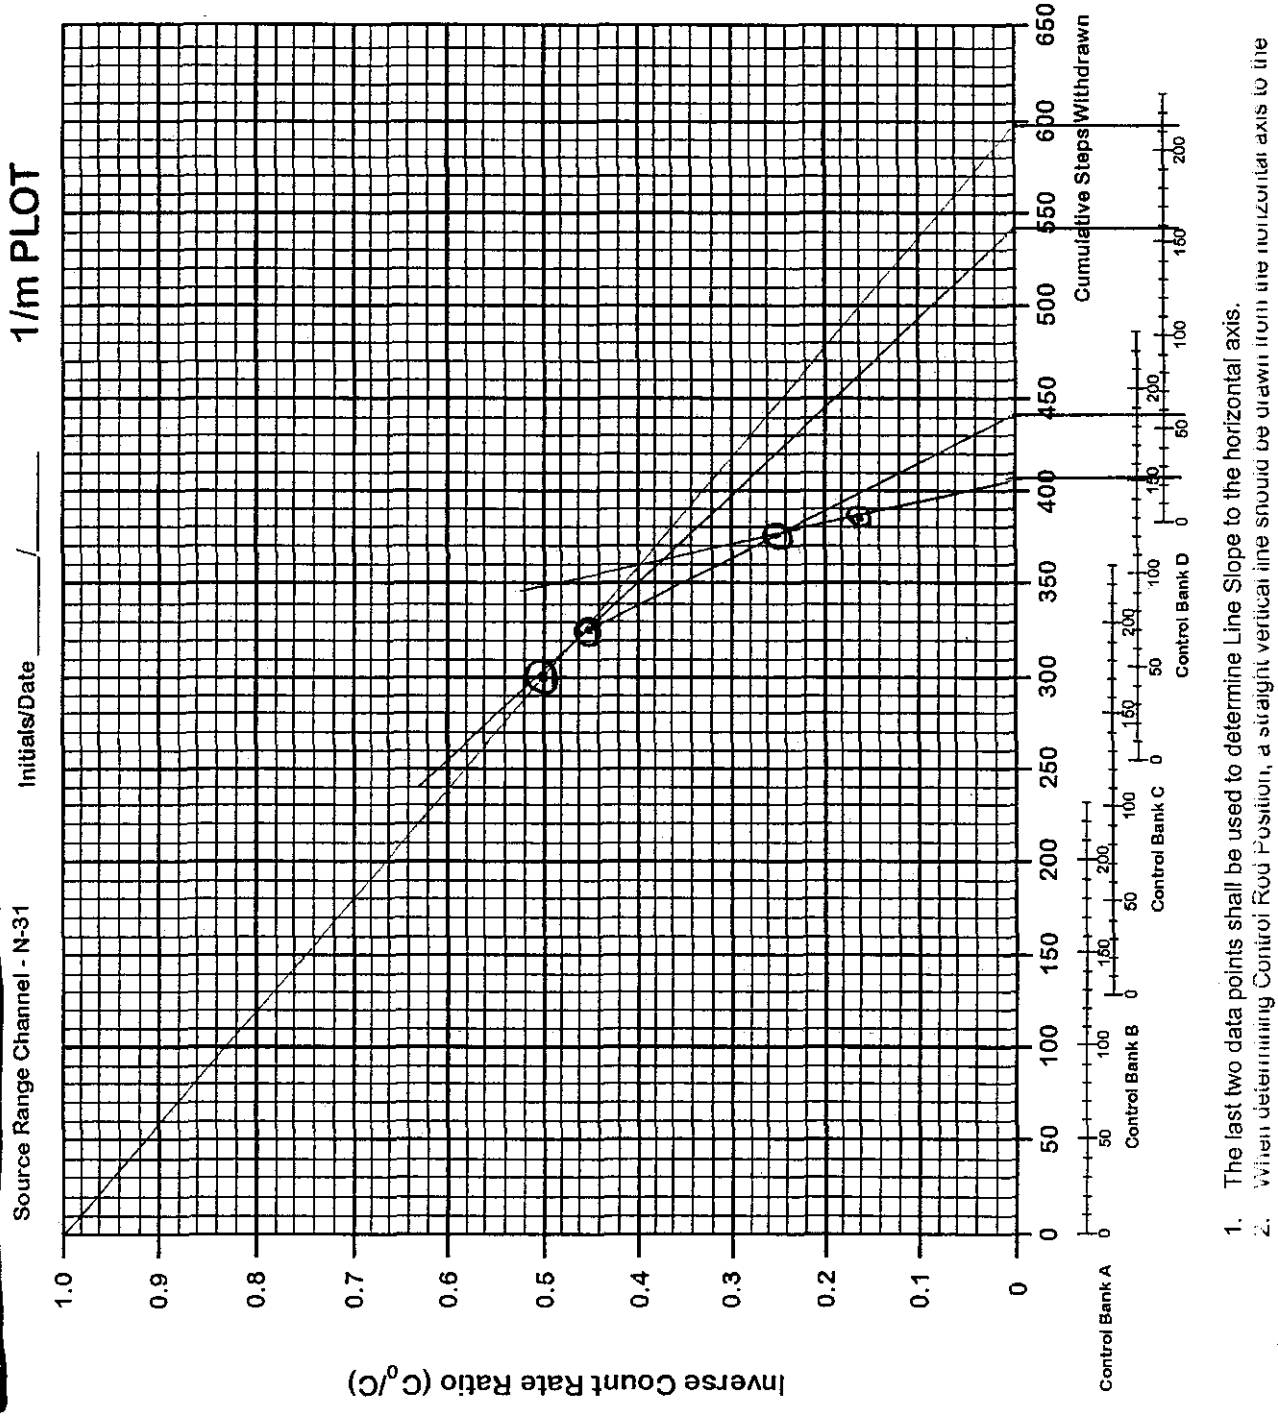
## EVALUATOR DIRECTION SHEET

| | |
|---|---|
| TASK STANDARD: | Determine that 1/M data predicts >500 pcm below ECP value for critical rod height. Notify SM/US that appropriate actions of 2OM-50.4.D must be taken. (No further rod withdrawal) |
| RECOMMENDED STARTING LOCATION: | Classroom |
| **DIRECTIONS:** | You are to perform the task Evaluate 1/M data |
| **INITIAL CONDITIONS:** | The unit is in Mode 2.<br>A reactor startup is in progress.<br>Control Bank C is at 129 steps.<br>Control Bank D is at 1 step.<br>RCS Boron concentration is 1875 ppm. |
| **INITIATING CUE:** | The Unit Supervisor directs you to complete the 1/M plot per 2OM-50.4.F data sheet 3 using the SR count rate data provided. Compare the 1/M data with the predicted ECP data and make a recommendation for further rod withdrawal. Document your recommendation in the box below. (Located on candidate direction sheet ) |
| REFERENCES: | 2OM-50.4.F, Performing An Estimated Critical Position Calculation, Rev. 7 |
| TOOLS: | Calculator; Ruler/straight edge. |
| HANDOUT: | 2OM-50.4.F, Performing An Estimated Critical Position Calculation, Rev. 7 partially completed Data Sheet 3 & Figure 1 |

**FIGURE 1**

ANSWER KEY



1. The last two data points shall be used to determine Line Slope to the horizontal axis.
2. When determining Control Rod Position, a straight vertical line should be drawn from the horizontal axis to the control bank steps.

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

TASK: You are to perform the task Evaluate 1/M data

INITIAL CONDITIONS: The unit is in Mode 2.
A reactor startup is in progress.
Control Bank C is at 129 steps.
Control Bank D is at 1 step.
RCS Boron concentration is 1875 ppm.

INITIATING CUE: The Unit Supervisor directs you to complete the 1/M plot per 2OM-50.4.F data sheet 3 using the SR count rate data provided. Compare the 1/M data with the predicted ECP data and make a recommendation for further rod withdrawal. Document your recommendation in the box below.

**RECOMMENDATION:**

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM"

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

## EVALUATOR DIRECTION SHEET

| | |
|---|---|
| TASK STANDARD: | Liquid Waste Eff Isol Vlv 2SGC-HCV100 is CLOSED and SG Blowdown Test Tank Pump 2SGC-P26B is stopped. RWDA-L Discharge Stop Data is documented. |
| RECOMMENDED STARTING LOCATION: | Simulator |
| **DIRECTIONS:** | You are to perform the task Respond to a Radiation Monitor Alarm. |
| **INITIAL CONDITIONS:** | Unit 2 is Mode 3 with the Shutdown banks withdrawn. A liquid waste discharge of Steam Generator Blowdown Test Tank 2SGC-TK23B is in progress to Unit 1 blowdown. A Discharge permit (RWDA-L – 99999T) has been issued for this discharge. A4-5C, Radiation Monitoring Level High alarm has been received in the control room. |
| **INITIATING CUE:** | The Unit Supervisor directs you to respond to the Radiation Monitoring Level High alarm in accordance with plant procedures. |
| REFERENCES: | 2OM-43.4.AEE Rev. 5<br>2OM-43.4.AAC Rev. 1<br>2OM-43.4.ACC Rev. 4 |

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

TASK: You are to perform the task Respond to a Radiation Monitor Alarm.

INITIAL CONDITIONS: Unit 2 is Mode 3 with the Shutdown banks withdrawn. A liquid waste discharge of Steam Generator Blowdown Test Tank 2SGC-TK23B is in progress to Unit 1 blowdown. A Discharge permit (RWDA-L – 99999T) has been issued for this discharge. A4-5C, Radiation Monitoring Level High alarm has been received in the control room.

INITIATING CUE: The Unit Supervisor directs you to respond to the Radiation Monitoring Level High alarm in accordance with plant procedures.

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

RTL#A9.520A
RWDA L-99999T

This permit authorizes the discharge of a maximum of 17705.3 gallons from tank 2SGC-TK23B at a maximum discharge rate of 85.0 gpm to the environment via U1 blowdown with a minimum total cooling tower blowdown of 4000.0 gpm at Unit 1 and Unit 2 with a monitor ALERT alarm setpoint of 1.22E-03 uCi/ml and a monitor HIGH alarm setpoint of 1.74E-03 uCi/ml on 2SGC-RQ100 (See Below for Alternate Alarm Setpoints)

This tank was recirculated YESTERDAY 0001 hours to YESTERDAY 2001 hours (at which time it was sampled) for a total of 1200 minutes.

Sb-122 3.343E-6
Sn-117m 2.455E-7
These radionuclides are not in LIQDIS data base. Values were entered into Form 1/2-ENV-01.05.F02 for release activity determination. pdb 4-23-08

**Independent / Replicate Sample Comparison:**

[ ] No radiation monitor available for the discharge path.
(See ODCM procedure 1/2-ODC-3.03, Table 3.3-12, Action 23)

[ ] Replicate sample was requested by Chemistry supervision:
(See NRC Regulatory Guide 4.15, Section C.5)

uCi/ml = Total gamma concentration from 1st Sample

uCi/ml = Total gamma concentration from 2nd Sample

% Diff = 100 [ (1st ) minus (2nd ) ] / (2nd )

**The total gamma concentration of the 1st & 2nd samples shall agree within a factor of 2 (i.e., % Diff is between -50% to +100%).**

**ADMINISTRATIVE GUIDE RELIEF:**

Reprocessing is not practical per Shift Manager _____

*IF Administrative Guide Relief is obtained from Shift Manager, THEN CR _____ was generated to address the need to reduce existing Administrative Guide values for future discharges during the applicable calendar month, quarter(s), and year.*

## RWDA-L: Part 5, Effluent Radiation Monitor Tracking

**RWDA-L-99999T**

Beaver Valley Power Station - 1 / 2

Tank Identification: 2SGC-TK23B

**Discharge Period** — See RWDA Cover Sheet for Actual Times

Initial Start Date/Time: TODAY 1HOUR AGO | Final Stop Date/Time: /

**Effluent Radiation Monitor & Determination of Acceptable Range of Readings During Discharge:**

**[ ] Unit 1 Liquid Waste Tank Discharge via [RM-1LW-104]:**

RWDA-L Count Rate: Form 1/2-ENV-05.04.F01 (page 2 of 5) = _____ net cpm

NOTE: MDCR = Minimum Detectable Count Rate

RM-1LW-104 bkgd = _____ cpm

RM-1LW-104 Gross HSP = _____ cpm

RM-1LW-104 Gross HHSP = _____ cpm

[ ] IF the RWDA-L Count Rate is ≤1,141 net cpm (MDCR), THEN the discharge is controlled by the alarm setpoints (No further calculations required.

[ ] IF the RWDA-L Count Rate is >1,141 net cpm, THEN determine the **Acceptable Range of Readings** for control of the discharge, as follows:

Maximum = (RWDA-L Count Rate _____ cpm) x (2) + (bkgd _____ cpm) = _____ cpm

Minimum = (RWDA-L Count Rate _____ cpm) / (2) + (bkgd _____ cpm) = _____ cpm

**[ ] Unit 1 Laundry & Shower Drain Tank Discharge via [RM-1LW-116]:**

RWDA-L Count Rate: Form 1/2-ENV-05.04.F01 (page 2 of 5) = _____ net cpm

NOTE: MDCR = Minimum Detectable Count Rate

RM-1LW-116 bkgd = _____ cpm

RM-1LW-116 Gross HSP = _____ cpm

RM-1LW-116 Gross HHSP = _____ cpm

[ ] IF the RWDA-L Count Rate is ≤236 net cpm (MDCR), THEN the discharge is controlled by the alarm setpoints (No further calculations required).

[ ] IF the RWDA-L Count Rate is >236 net cpm, THEN determine the **Acceptable Range of Readings** for control of the discharge, as follows:

Maximum = (RWDA-L Count Rate _____ cpm) x (2) + (bkgd _____ cpm) = _____ cpm

Minimum = (RWDA-L Count Rate _____ cpm) / (2) + (bkgd _____ cpm) = _____ cpm

**[ ] Unit 2 Liquid Waste Tank Discharge via [2SGC-RQ100]:**

RWDA-L Count Rate: Form 1/2-ENV-05.04.F01 (page 2 of 5) = _____ net cpm

NOTE: MDCR = Minimum Detectable Count Rate

2SGC-RQ100 bkgd = _____ uCi/ml

2SGC-RQ100 Gross ASP = _____ uCi/ml

2SGC-RQ100 Gross HSP = _____ uCi/ml

[ ] IF the RWDA-L Count Rate is ≤247 net cpm (MDCR), THEN the discharge is controlled by the alarm setpoints (No further calculations required).

[ ] IF the RWDA-L Count Rate is >247 net cpm, THEN determine the **Acceptable Range of Readings** for control of the discharge, as follows:

Maximum = (RWDA-L Count Rate _____ cpm) x (5.61E-9 uCi/ml/cpm) x (2) + (bkgd _____ uCi/ml) = _____ uCi/ml

Minimum = (RWDA-L Count Rate _____ cpm) x (5.61E-9 uCi/ml/cpm) / (2) + (bkgd _____ uCi/ml) = _____ uCi/ml

**Gross Effluent Radiation Monitor Readings:** NOTE: Record actual reading (ie; Do Not Round Down)

Obtain At Least 2 Effluent Monitor Readings Per Discharge, AND At Least 1 Per 8 hr Shift For the Applicable Monitor:

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

[ ] IF Effluent Monitor Readings are not within the **Acceptable Range of Readings**, THEN contact Chemistry Supervision

[ ] Chemistry Supervision has determined that the discharge should be terminated; and Operations has been notified to terminate the discharge.

[ ] Chemistry Supervision has determined that the discharge may continue. Reasoning: _____

**Final Review of all Monitor Readings by Chemistry Supervision:**

**Gross Calculated Monitor Reading = _____ [ ] cpm, [ ] uCi/ml**

**% Difference = (Max Obs Reading - Calc Reading) / Calc Reading = _____ % [ ] Sat [ ] Unsat**

**NOTES: Sat = SATISFACTORY: % Difference is Within a Factor of 2 ( -50% to +100%)**
**Unsat = UNSATISFACTORY: % Difference is Outside the "Sat" Range.**
**Generate a Condition Report**

**Reviewed By:** _____ **SAP No:** _____ **Date:** _____

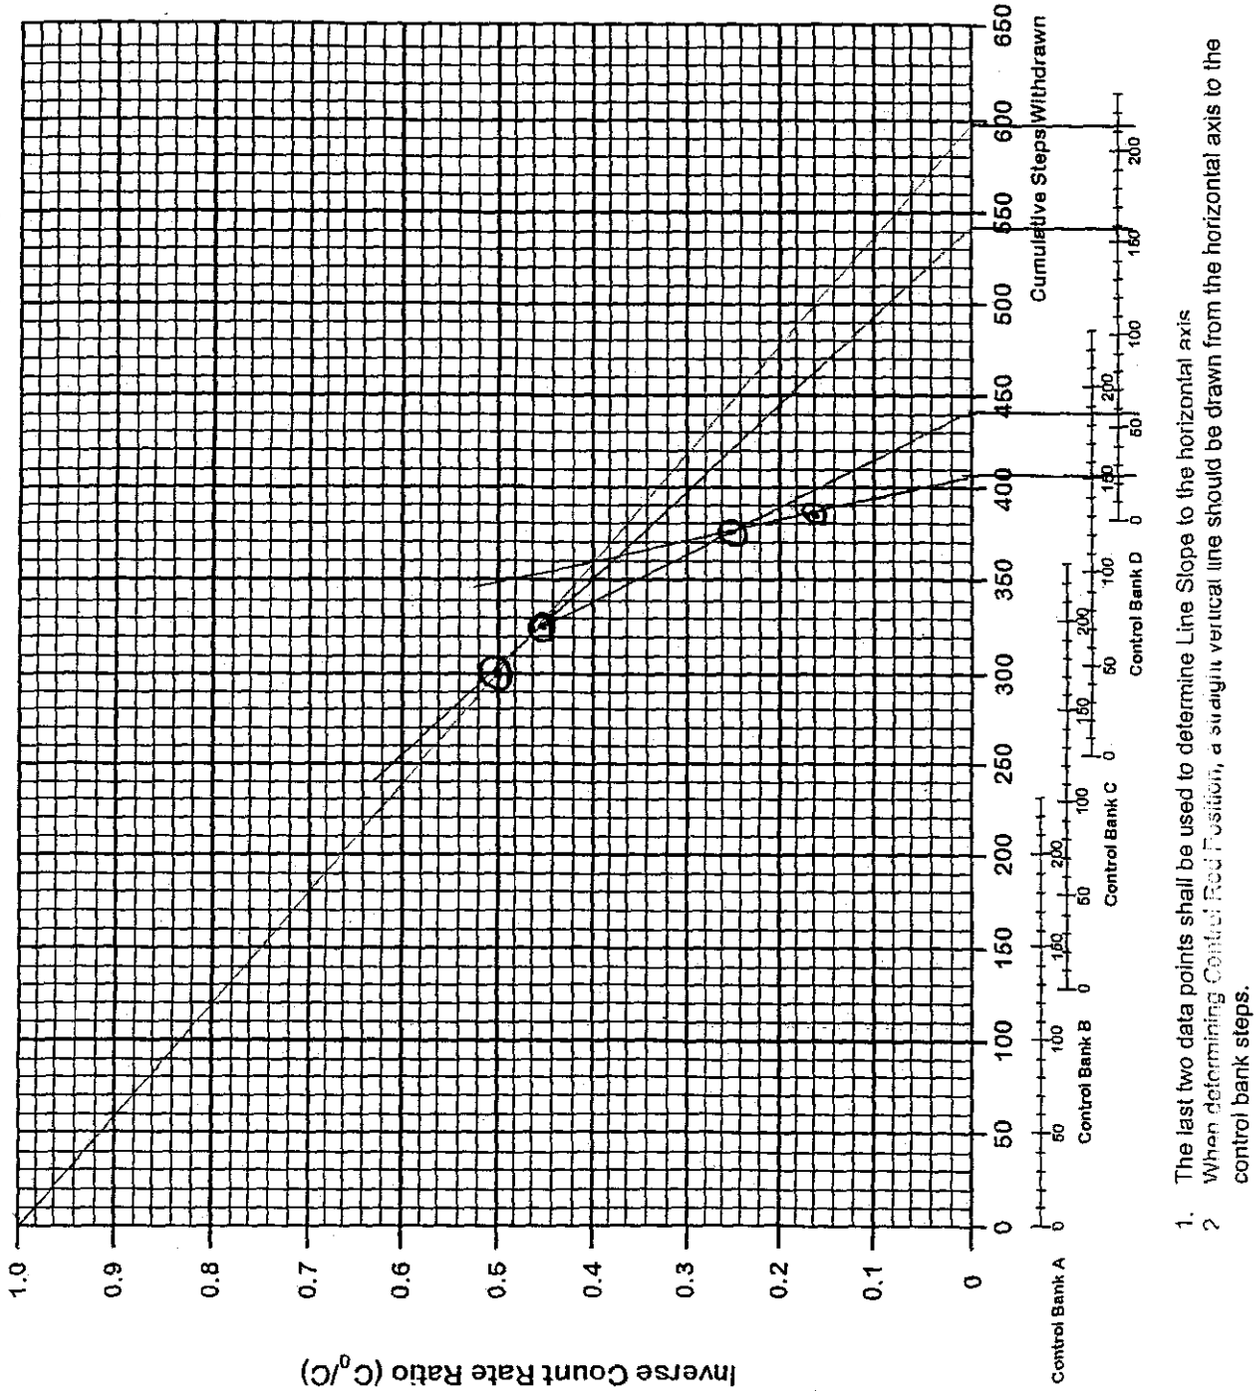
**FIGURE 1**

ANSWER KEY

Source Range Channel - N-31 Initials/Date ____/____ 1/m PLOT



1. The last two data points shall be used to determine Line Slope to the horizontal axis
2. When determining Control Rod Position, a straight vertical line should be drawn from the horizontal axis to the control bank steps.

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

TASK: You are to perform the task Evaluate 1/M data.

INITIAL CONDITIONS: The Unit is in Mode 2.
A reactor startup is in progress.
Control Bank C is at 129 steps.
Control Bank D is at 1 step.
RCS Boron concentration is 1875 ppm.

INITIATING CUE: The Unit Supervisor directs you to complete the 1/M plot per 2OM-50.4.F data sheet 3 using the SR count rate data provided. Compare the 1/M data with the predicted ECP data and determine actions related to further rod withdrawal. Document any recommended actions in the box below.

**RECOMMENDED ACTIONS:**

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

| TASK: | You are to perform the task Review/Approve completed Surveillance of RHR Pump 2RHS*P21B to determine operability as defined by the acceptance criteria. |
| INITIAL CONDITIONS: | Unit 2 is in Mode 5 with RCS core exit thermocouple temperatures at 110°F. Surveillance 2OST-10.2 Residual Heat Removal Pump [2RHS*P21B] Performance Test has been completed by the RO and reviewed by the STA. |
| INITIATING CUE: | Review/Approve completed Surveillance of RHR Pump 2RHS*P21B to determine operability as defined by the acceptance criteria. Document the results of your review in the comments section of the cover page. |

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

| TOOLS: | Calculator |
| HANDOUT: | RWDA-L-99999T filled out with the following errors:<br>18,000 gal volume for the tank instead of 17,705 gals.<br>Wrong alternate radiation monitor alarm setpoint calculation. ($1.88E^{-3}$ instead of $1.88E^{-4}$<br>2OM-25.4.L, Discharging Steam Generator Blowdown Evaporator Test Tank [2SGC-TK23A(B)] Contents To Cooling Tower Blowdown filled out up to step IV.A.12 |

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

TASK: You are to perform the task Review/Approve LW Discharge.

INITIAL CONDITIONS: Unit 2 is at 100% power. RWDA-L-99999T has been prepared for discharging Steam Generator Blowdown Evaporator Test Tank 2SGC-TK23B. Steam Generator Blowdown Evaporator Test Tank 2SGC-TK23B level is 130 inches. Procedure 2OM-25.4.L, Discharging Steam Generator Blowdown Evaporator Test Tank [2SGC-TK23A(B)] Contents To Cooling Tower Blowdown has been completed through step IV.A.11.

INITIATING CUE: Approve RWDA-L-99999T IAW procedure 2OM-25.4.L, Discharging Steam Generator Blowdown Evaporator Test Tank [2SGC-TK23A(B)] Contents To Cooling Tower Blowdown step IV.A.12.
Document the results of your approval in appropriate steps of 2OM-25.4.L AND in the block below.

**RESULTS:**

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

| Cs-137 | | If ≥4E-6, reprocess, or obtain Administrative Guide Relief, as shown >>>>> | |
| Total Particulate | 7.19 E-5 | If ≥1E-4, reprocess, or obtain Administrative Guide Relief, as shown >>>>> | |

**Independent / Replicate Sample Comparison:**

[ ] No radiation monitor available for the discharge path.
(See ODCM procedure 1/2-ODC-3.03, Table 3.3-12, Action 23)

[ ] Replicate sample was requested by Chemistry supervision:
(See NRC Regulatory Guide 4.15, Section C.5)

uCi/ml = Total gamma concentration from 1st Sample

uCi/ml = Total gamma concentration from 2nd Sample

% Diff = 100 [ (1st _____ ) minus (2nd _____ ) ]
(2nd _____ )

**The total gamma concentration of the 1st & 2nd samples shall agree within a factor of 2 (i.e., % Diff is between -50% to +100%).**

**ADMINISTRATIVE GUIDE RELIEF:**

Reprocessing is not practical per Shift Manager

*IF Administrative Guide Relief is obtained from Shift Manager, THEN CR _____ was generated to address the need to reduce existing Administrative Guide values for future discharges during the applicable calendar month, quarter(s), and year.*

## RWDA-L: Part 5, Effluent Radiation Monitor Tracking

**Beaver Valley Power Station - 1 / 2**

RWDA-L-99999T

Tank Identification: 2SGC-TK23B

**Discharge Period** — See RWDA Cover Sheet for Actual Times

Initial Start Date/Time: / Final Stop Date/Time: /

**Effluent Radiation Monitor & Determination of Acceptable Range of Readings During Discharge:**

**[ ] Unit 1 Liquid Waste Tank Discharge via [RM-1LW-104]:**

RWDA-L Count Rate: Form 1/2-ENV-05.04.F01 (page 2 of 5) = _____ net cpm

NOTE: MDCR = Minimum Detectable Count Rate

RM-1LW-104 bkgd = _____ cpm

RM-1LW-104 Gross HSP = _____ cpm

RM-1LW-104 Gross HHSP = _____ cpm

[ ] IF the RWDA-L Count Rate is ≤1,141 net cpm (MDCR), THEN the discharge is controlled by the alarm setpoints (No further calculations required).

[ ] IF the RWDA-L Count Rate is >1,141 net cpm, THEN determine the **Acceptable Range of Readings** for control of the discharge, as follows:

Maximum = (RWDA-L Count Rate _____ cpm) x (2) + (bkgd _____ cpm) = _____ cpm

Minimum = (RWDA-L Count Rate _____ cpm) / (2) + (bkgd _____ cpm) = _____ cpm

**[ ] Unit 1 Laundry & Shower Drain Tank Discharge via [RM-1LW-116]:**

RWDA-L Count Rate: Form 1/2-ENV-05.04.F01 (page 2 of 5) = _____ net cpm

NOTE: MDCR = Minimum Detectable Count Rate

RM-1LW-116 bkgd = _____ cpm

RM-1LW-116 Gross HSP = _____ cpm

RM-1LW-116 Gross HHSP = _____ cpm

[ ] IF the RWDA-L Count Rate is ≤236 net cpm (MDCR), THEN the discharge is controlled by the alarm setpoints (No further calculations required).

[ ] IF the RWDA-L Count Rate is >236 net cpm, THEN determine the **Acceptable Range of Readings** for control of the discharge, as follows:

Maximum = (RWDA-L Count Rate _____ cpm) x (2) + (bkgd _____ cpm) = _____ cpm

Minimum = (RWDA-L Count Rate _____ cpm) / (2) + (bkgd _____ cpm) = _____ cpm

**[ ] Unit 2 Liquid Waste Tank Discharge via [2SGC-RQ100]:**

RWDA-L Count Rate: Form 1/2-ENV-05.04.F01 (page 2 of 5) = _____ net cpm

NOTE: MDCR = Minimum Detectable Count Rate

2SGC-RQ100 bkgd = _____ uCi/ml

2SGC-RQ100 Gross ASP = _____ uCi/ml

2SGC-RQ100 Gross HSP = _____ uCi/ml

[ ] IF the RWDA-L Count Rate is ≤247 net cpm (MDCR), THEN the discharge is controlled by the alarm setpoints (No further calculations required).

[ ] IF the RWDA-L Count Rate is >247 net cpm, THEN determine the **Acceptable Range of Readings** for control of the discharge, as follows:

Maximum = (RWDA-L Count Rate _____ cpm) x (5.61E-9 uCi/ml/cpm) x (2) + (bkgd _____ uCi/ml) = _____ uCi/ml

Minimum = (RWDA-L Count Rate _____ cpm) x (5.61E-9 uCi/ml/cpm) / (2) + (bkgd _____ uCi/ml) = _____ uCi/ml

**Gross Effluent Radiation Monitor Readings:** NOTE: Record actual reading (ie: Do Not Round Down)

Obtain At Least 2 Effluent Monitor Readings Per Discharge, AND At Least 1 Per 8 hr Shift For the Applicable Monitor:

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

Date / Time _____ / _____: Reading _____: Is reading within range? Yes[ ] No[ ]: RT Initials _____: SAP No._____

[ ] IF Effluent Monitor Readings are not within the **Acceptable Range of Readings**, THEN contact Chemistry Supervision

[ ] Chemistry Supervision has determined that the discharge should be terminated, and Operations has been notified to terminate the discharge.

[ ] Chemistry Supervision has determined that the discharge may continue. Reasoning: _____

**Final Review of all Monitor Readings by Chemistry Supervision:**

**Gross Calculated Monitor Reading = _____ [ ] cpm, [ ] uCi/ml**

**% Difference = (Max Obs Reading - Calc Reading) / Calc Reading = _____ % [ ] Sat [ ] Unsat**

**NOTES: Sat = SATISFACTORY: % Difference is Within a Factor of 2 ( -50% to +100%)**
**Unsat = UNSATISFACTORY: % Difference is Outside the "Sat" Range.**
**Generate a Condition Report**

## EVALUATOR DIRECTION SHEET

| | |
|---|---|
| TASK STANDARD: | The correct EPP classification is made for the associated scenario **AND** all "critical" steps of the initial notification form are correctly completed. |
| RECOMMENDED STARTING LOCATION: | Simulator |
| **DIRECTIONS:** | You are to perform the task Classify An Emergency Event and complete the initial notification form. |
| **INITIAL CONDITIONS:** | The simulator scenario just completed.(2LOT6 NRC Exam) |
| **INITIATING CUE:** | As the Unit Supervisor, you are to classify the events in the scenario just completed in accordance with EPP/I-1a, Recognition and Classification of Emergency Conditions **AND** complete the initial notification form.<br>For the purpose of filling out the initial notification form the following conditions exist:<br>• The code word is "TANGO"<br>• Unit 1 is at 100% steady state power<br>• Wind direction at 150' is 65°<br>• Wind speed at 35' is 7 mph |
| REFERENCES: | EPP/I-1a, Recognition and Classification of Emergency Conditions, Rev. 10 |
| TOOLS: | None |
| HANDOUT: | EPP/I-1a, Recognition and Classification of Emergency Conditions, Rev. 10 |

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

TASK: You are to perform the task Classify An Emergency Event and complete the initial notification form.

INITIAL CONDITIONS: The simulator scenario just completed.(2LOT6 NRC Exam)

INITIATING CUE: As the Unit Supervisor, you are to classify the events in the scenario just completed in accordance with EPP/I-1a, Recognition and Classification of Emergency Conditions **AND** complete the initial notification form.
For the purpose of filling out the initial notification form the following conditions exist:

- The code word is "TANGO"
- Unit 1 is at 100% steady state power
- Wind direction at 150' is 65°
- Wind speed at 35' is 7 mph

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

| | |
|---|---|
| TASK: | You are to perform the task of Control Rod Assembly Partial Movement Test. |
| INITIAL CONDITIONS: | The reactor is in Mode 1, 100% power. All procedural Initial Conditions are satisfied. |
| INITIATING CUE: | Your supervisor directs you to verify Control Bank 'D' is operable by performing Section VII.B of 2OST-1.1, Control Rod Assembly Partial Movement Test, and report your results to your supervisor. |

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM"

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

TASK:

You are to perform the task of Establishing RCS Bleed and Feed per FR-H.1, Response To Loss of Secondary Heat Sink.

**INITIAL CONDITIONS:**

The plant has tripped from 100% power. FR-H.1, Response To Loss of Secondary Heat Sink has been entered. Steps 1 through 5 are complete. While performing step 6, the RCS bleed and feed criteria of continuous action Step 2 are met due to S/G WR levels dropping to less than 14%.

**INITIATING CUE:**

Your supervisor directs you to establish RCS bleed and feed by performing steps 13 through 16 of FR-H.1, Response To Loss of Secondary Heat Sink.

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

TASK: You are to perform the task respond to Pressurizer Relief Tank Trouble.

INITIAL CONDITIONS:

- The plant is operating at 25% power.
- A PRZR PORV was leaking BUT is NOW NO LONGER LEAKING.
- The Pressurizer Relief Tank Trouble annunciator [A4-3H] has just actuated as a result of this leakage.

INITIATING CUE: Your supervisor directs you to respond to Annunciator A4-3H "Pressurizer Relief Tank Trouble" and take action to clear the annunciator.

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

Evaluator Signature: _____

| JPM NUMBER: 2CR-072<br>JPM REVISION: 1 | JPM TITLE: Shift From Main Feedwater Reg Valves to Bypasses |
|---|---|

**EVALUATOR DIRECTION SHEET**

TASK STANDARD:

The "A" Bypass Feed Regulating Valve has been placed in service in automatic mode and then, after candidate recognizes failure of automatic control, returned to Manual mode with candidate controlling steam generat r level.

RECOMMENDED STARTING LOCATION:

CONTROL ROOM

**DIRECTIONS:**

You are to perform the task Transfer from Main Feed Regulating Valve to Bypass.

**INITIAL CONDITIONS:**

- A plant shutdown is in progress
- The plant is at approximately 25% power.
- 2OM-52.4.R.1.F, Station Shutdown From 100% Power To Mode 5 has been completed up to Step IV.D.5.
- The 21B and C S/G main Feed Reg Valves have been removed from service.
- The 21A main Feed Reg Valve [2FWS-FCV478] operated erratically during the shutdown and is currently in "AUTO" for observation.

**INITIATING CUE:**

- Your supervisor directs you to place 21A S/G Bypass Feed Reg Valve [2FWS-FCV479] in service in accordance with 2OM-52.4.R.1.F, Station Shutdown From 100% Power To Mode 5 Attachment 10 step A.
- [2FWS-FCV479] is to be placed in automatic to control steam generator level.
- You are to maintain 21A S/G NR level between 39% and 49%.

# TRAINING MATERIAL CHANGE FORM

Affected Training Materials: 2PL-048

Type of Change:

| | | |
|---|---|---|
| ☒ Changes Requiring Revision | Learning Objective Related Change?<br>☐ Yes ☒ No | New Rev. # 11 |
| ☐ Changes Not Requiring Revision | The Change Does Not Impact Learning Objectives or Material Quality. | Existing Rev. # 10<br>New Change # |

List/Description of Change(s):

Updated to current procedure revisions.
Added 2LOT6 NRC Exam Validation comments.

- Split JPM into 2 separate sections for ease of performance
- Added Cabinet mark numbers to first evaluator note
- Added evaluator cue for annunciator A2-2H

Reason for Change (s):

JPM Enhancement

## EVALUATOR DIRECTION SHEET

| | |
|---|---|
| TASK STANDARD: | Relay K622A (K601B and K620B) are tested IAW the surveillance procedure and determined to meet the acceptance criteria. |
| EVALUATOR NOTE: | This JPM is formatted to use either SSPS Train.<br>During "Protected Train A" weeks, use 2OST 1.12A, Train B test and JPM pages 12-23.<br>During "Protected Train B" weeks, use 2OST 1.11A, Train A test and JPM pages 6-11 |
| RECOMMENDED STARTING LOCATION: | In Plant |
| **DIRECTIONS:** | You are to simulate the Main Feedwater Isolation safeguards test. Following completion of this portion of the OST, determine if the test results satisfy the acceptance criteria. |
| **INITIAL CONDITIONS:** | The plant is operating under steady-state conditions at 100% power. All plant systems are configured in their normal system arrangement. 2OST 1.11A, Safeguards Protection System Train A Blockable Test, (or 2OST 1.12A, Safeguards Protection System Train B Blockable Test) is in progress and has been completed up to the beginning of Section VII.B. Communications have been established with the control room and the front panel of the Safeguards Test Cabinet is unlocked and open. |
| **INITIATING CUE:** | Your supervisor directs you continue with the test by completing Section VII.B, and when complete, determine if the test results satisfy the acceptance criteria. |
| REFERENCES: | 2OST-1.11A Revision 15<br>2OST-1.12A Revision 19 |
| TOOLS: | Key #79 Train A SSPS<br>-or-<br>Key #126 Train B SSPS |
| HANDOUT: | 2OST-1.11A pages 1-16 (content) and 45-46 (table 1 & table 2)<br>-or-<br>2OST-1.12A pages 1-21 (content) and 51-52 (table 1 & table 2) |

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

| | |
|---|---|
| TASK: | You are to simulate the Main Feedwater Isolation safeguards test. Following completion of this portion of the OST, determine if the test results satisfy the acceptance criteria. |
| INITIAL CONDITIONS: | The plant is operating under steady-state conditions at 100% power. All plant systems are configured in their normal system arrangement. 2OST 1.11A, Safeguards Protection System Train A Blockable Test, (or 2OST 1.12A, Safeguards Protection System Train B Blockable Test) is in progress and has been completed up to the beginning of Section VII.B. Communications have been established with the control room and the front panel of the Safeguards Test Cabinet is unlocked and open. |
| INITIATING CUE: | Your supervisor directs you continue with the test by completing Section VII.B. and when complete, determine if the test results satisfy the acceptance criteria. |

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

OPERATIONS JOB PERFORMANCE MEASURE

## CANDIDATE DIRECTION SHEET

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

TASK: You are to simulate the task Local Shutdown of [2FWE*P22].

INITIAL CONDITIONS:

- The Plant is in Mode 3 with SG pressures at 700 psig.
- 2OST-24.4A Steam Driven Auxiliary Feed Pump [2FWE*P22] Full Flow Test, is in progress and completed satisfactory through Part V.F.**(THE PUMP IS CURRENTLY RUNNING)**
- **NO RWDA-G Discharge Authorization** was required for this evolution.

INITIATING CUE: Your supervisor directs you to perform Part G Pump Shutdown step1.a through step 1.e of 2OST-24.4A Steam Driven Auxiliary Feed Pump [2FWE*P22] Full Flow Test, to shutdown [2FWE*P22].

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

## EVALUATOR DIRECTION SHEET

| | |
|---|---|
| TASK STANDARD: | Locally start the No. 1(2) Diesel Generator. |
| RECOMMENDED STARTING LOCATION: | In Plant |
| EVALUATOR NOTE: | This JPM is designed for either Train. Perform on Diesel Generator #2 if Protected Train A and on Diesel Generator #1 if Protected Train B. Train B equipment in parentheses. |
| **DIRECTIONS:** | You are to simulate the task locally start the No. 1(2) Emergency Diesel Generator. |
| **INITIAL CONDITIONS:** | A station blackout has occurred. OM-53A Procedure ECA-0.0, "Loss of All AC Power," has led the crew to the step which requires local action to restore power. 2SWS*P21A(B) control switch is in AUTO. |
| **INITIATING CUE:** | Your supervisor directs you to use Attachment A-1.5 of ECA-0.0 to locally start the No. 1(2) Diesel Generator and energize the 2AE(2DF) bus, but to not load equipment onto the bus. You are given the key for the Diesel Generator (use of keys will be simulated). |
| REFERENCES: | 2OM-53A.1.A-1.5, Local Actions to Restore AC Power, Issue 1C, Revision 5 |
| TOOLS: | Key 138 for Excitation Panel will be provided when needed<br>Key for Local Start will be simulated (SR 27/28) |
| HANDOUT: | 2OM-53A.1.A-1.5, Local Actions to Restore AC Power, Issue 1C, Revision 5 |

OPERATIONS JOB PERFORMANCE MEASURE

## CANDIDATE DIRECTION SHEET

**Use this sheet if Protected Train "A"**

* THIS SHEET TO BE GIVEN TO CANDIDATE *

☐ Read:

TASK: Locally start No. 2 Diesel Generator

INITIAL CONDITIONS: A station blackout has occurred. OM-53A Procedure ECA-0.0, "Loss of All AC Power," has led the crew to the step which requires local action to restore power. 2SWS*P21B control switch is in AUTO.

INITIATING CUE: Your supervisor directs you to use Attachment A-1.5 of ECA-0.0 to locally start the No. 2 Diesel Generator and energize the 2DF bus, but do not load equipment onto the bus. You are given the key for the Diesel Generator (use of keys will be simulated).

☐ At this time, ask the evaluator any questions you have on this JPM.

☐ When satisfied that you understand the assigned task, announce "I am now beginning the JPM".

☐ Simulate performance or perform as directed the required task.
Point to any indicator or component you verify or check and announce your observations.

☐ After determining the Task has been met announce " I have completed the JPM".
Then hand this sheet to the evaluator.

Initial Conditions: BOL, ~5% power following Xe free S/U, CB D = 104, 2003 PPM IC-165

Turnover: Continue plant startup IAW 2OM-52.4.A. [2SAS-C21B] Station Air Compressor OOS, will not be returned this shift

Critical Tasks:

1. E-0.I Crew establishes flow from at least one high head ECCS pump before transition out of E-0.
2. E-0.P Crew manually actuates main steam line isolation before a Severe (orange path) challenge develops to either the Sub-criticality or Integrity CSF or before transition to ECA-2.1, whichever occurs first.
3. E-2.A Crew isolates the faulted SG and directs operator to close isolation valve(s) operated from outside of the control room before transition out of E-2.

| Event No. | Malf. No. | Event Type | Event Description |
|---|---|---|---|
| 1 | | R(RO)<br>N(ALL) | Crew raises power IAW procedure<br>(Must raise power above 10% before N-36 failure) |
| 2 | NIS07B | *SRO T.S.* | IRNI N-36 Intermediate Range Nuclear Instrument Inst Pwr fuse blows |
| 3 | XMT-RCS019A | I(RO/SRO)<br>*SRO T.S.* | [2RCS*LT459] Controlling PRZR Level Channel fails low, L/D isolates |
| 4 | | N(RO/SRO) | Alternate channel selected and L/D restored |
| 5 | CNH-CFW15B | C(BOP/SRO) | 'C' BPFRV fails open in auto, manual control required |
| 6 | MSS01C | M(ALL) | Steam leak inside CNMT slowly progresses to Steam line RUPTURE inside CNMT, SI, CIA, CIB |
| 7 | PMP-CHS002<br>PPL07A | C(RO/SRO) | [2CHS*P21B] HHSI Pump trips on SI<br>[2CHS*P21A] HHSI pump Fails to AUTO, requires manual start on SI |
| 8 | PPL10A<br>PPL10B | C(BOP/SRO) | AUTO MSLI failure BOTH Trains, requires manual actuation |

(N)ormal, (R)eactivity, (I)nstrument, (C)omponent, (M)ajor

The crew will assume the shift at approximately 5% power BOL, with station air compressor 2SAS-C21B OOS. Crew instructions are to continue the plant start-up. The crew will perform a Normal Power Increase to > 10%. When power is greater than 10%, the instrument power fuse will fail on Intermediate Range Channel N-36. The crew will respond to the annunciators and implement the actions of AOP 2.2.1B, Intermediate Range Channel Malfunction. After the US implements the required Technical Specification actions, the controlling channel of PRZR level [2RCS*LT459] will FAIL LOW causing letdown isolation. The crew will respond to the annunciators and implement the actions of instrument failure procedure OM 2.6.4.IF ATT #1. After stabilizing the plant, letdown will be restored IAW normal operating procedure 2OM-7.4.AB, Restoring Charging and Letdown. After the US implements the required Technical Specification actions "C" BPFRV will FAIL OPEN in automatic. The crew will be required to take manual control of "C" BPFRV to restore and maintain SG level. After SG levels are stabilized, a steam leak will develop inside containment. The leak will slowly progress to a full steam line RUPTURE causing RX TRIP, SI, CIA and CIB. The crew will respond by implementing the actions of E-0, Reactor Trip or Safety Injection. The actions of E-0, Reactor Trip or Safety Injection will be complicated by HHSI pump 21B tripping after the SI start signal and HHSI pump 21A failing to automatically start on the receipt of the SI signal. The crew must identify these failures and manually start the 21A HHSI pump. The crew must then diagnosis the faulted SG and transition into E-2, Faulted SG Isolation. The actions of E-2, Faulted SG Isolation will be complicated by a failure of SLI. The crew must identify this failure and manually initiate SLI. After completing the actions of E-2, Faulted SG Isolation the crew must determine that the SI termination criteria have been met and transition into ES-1.1, SI Termination. After the crew has terminated HHSI flow the scenario will be terminated.

**EOP Flow Path:**
E-0, Reactor Trip or Safety Injection → E-2, Faulted Steam Generator Isolation → ES-1.1, SI Termination.

**INITIAL CONDITIONS:** Approx 5% Power, CBD = 104, XE increasing from XE free S/U, BOL, 2003 PPM Boron, IC-165

## SHIFT TURNOVER INFORMATION

1. Protected Train is Train "B"
2. [2SAS-C21B] undergoing a compressor overhaul, will not be returned until 3 days from now
3. [2FWS-P21A] operating, SG levels maintained via BPFRVs operating in AUTO
4. Continue plant S/U IAW **2OM-52.4.A step 6**
5. Reactor Engineering has provided the reactivity plan for the continuation of the startup

## SCENARIO SUPPORT MATERIAL REQUIRED

Reactivity plan placard for BOL
**2OM-52.4.A** signed-off through step 5.
Placard for [2FWE*P22] position stating [2FWE*P22] is aligned to "A" header
Place plaque on wall for Protected Train "B"

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| Initialize IC Set 165, and establish initial plant conditions. | Reactor plant at approx 5% power, BOL, equilibrium conditions. RCS boron 2003 PPM, CBD = 104 steps. | | |
| Insert the following per the Simulator Setup section of the HTML File for this drill: | Inserts all pre-loads required to support the drill | | |
| **IMF PMP-CAS004 (0 0) 1** | [2SAS-C21B] OOS | | |
| **IMF PPL10A (0 0)** | Prevent auto MSLI Trn "A" | | |
| **IMF PPL10B (0 0)** | Prevent auto MSLI Trn "B" | | |
| **TRGSET 1 'JPPLSI(1) == 1'** | Set trigger 1 on SI actuation | | |
| **IMF PMP-CHS002 (1 0) 1** | [2CHS*P21B] trips on SI initiation | | |
| **IMF PPL07A (0 0) 0** | [2CHS*P21A] fails to auto start on SI initiation, manual start required | | |
| **TRG 1 'IMF MSS01C 1E7'** | 'C' Steam line rupture inside CNMT on SI actuation | | |
| **TRGSET 2 'MCRFNS(3) <= 225'** | Set trigger 2 on reactor trip | | |
| **TRG 2 'IMF MSS01C 1E7'** | 'C' Steam line rupture inside CNMT on reactor trip | | |
| **TRGSET 3 'TPCSTAAU <= 547'** | Set trigger 3 on Tavg < 547F | | |
| **TRG 3 'IMF MSS01C 1E7'** | 'C' Steam line rupture inside CNMT when Tavg decreases below 547F | | |
| **BAT STUFFON.DAT** | Horns, Printers, Sounds ready | | |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| Assign shift positions<br><br>SM:_____<br><br>US:_____<br><br>RO:_____<br><br>BOP:_____<br><br>STA:_____ | | | |
| Conduct a shift turnover with oncoming operators. | Simulator Frozen until after shift turnover unless it needs to be run momentarily for an alignment change. | | |
| When the shift turnover is completed, place the simulator to RUN and commence the drill. | Simulator running. | | Crew assumes control of the Unit. |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|

**EVENT #1:**

Normal Power Increase to > 10%

US directs crew to conduct power increase IAW **2OM-52.4.A** and the reactivity plan provided by Reactor Engineering

BOP Raises turbine reference and setter to raise turbine power.

RO dilutes/withdraws rods to raise reactor power.

Continue with next event **AFTER** IRNI High Flux Trip has been blocked above 10% **AND** LE discretion

**EVENT #2:**

IRNI N-36 Instrument power fuse blows

**IMF NIS07B (0 0) 0**

**IMMEDIATE PLANT RESPONSE:**

A4-4E NIS DETECTOR COMPENSATOR TROUBLE (V0139D, V0132D)

[2NMI-NI36B] Intermediate range current indicates low (BB B)

N-36 meter at NIS racks indicates low

N-36 Inst Pwr fuse indicates blown

RO verifies alarms, diagnose failure of N-36 IRNI

Crew identifies blown fuse

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | Light on N-36 rack drawer:<br>CONTROL POWER ON – LIT<br>HIGH LEVEL TRIP – LIT<br>HIGH LEVEL ROD STOP – LIT<br>POWER ABOVE P-6 PERMISSIVE – LIT | | |
| | LOSS OF DETECTOR VOLTS – LIT<br>LOSS OF COMP VOLTS – LIT<br>BB B Status panel 308 – LIGHT C-10 – LIT<br>NO PLANT TRANSIENT | | Crew refers to **ARP and AOP 2.2.1B** |
| | Operable recorders selected on VB B | | RO verifies operable recorders selected to VB B recorders |
| | MODE 1 operation | | US refers to TS 3.3.3 for post acc monitoring (when time permits) |
| | Plant is above P10 | | US directs actions IAW **step 6** based on current plant operating conditions |
| | Both IRNIS block switches to BLOCK position | | RO blocks both IRNIS Rod Stop and Reactor Trip functions (previously performed) |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | Caution tags in place to prompt MANUAL Unblock of SRNI on plant S/D | | RO places caution tags on both SRNI Block/Reset switches |
| | | | US directs continued plant operations and continue power increase |
| | Ann A4-5F NIS INT RANGE HIGH FLUX ROD WITHDRAWL STOP actuates<br>Ann A4-5E NIS SOURCE/INT RANGE HIGH FLUX TRIP BYPASS – LIT<br>(N0096D) – TRIPPED<br>Status light "LEVEL TRIP BYPASS" – LIT | | Crew bypasses reactor trip function by placing LEVEL TRIP switch of inoperable channel in BYPASS position |
| | Caution tag in place | | BOP places Caution Tag on Level Trip switch for N-35 |
| | Power increase continues | | Crew continues power increase IAW **2OM-52.4.A** and reactivity plan |

**EVENT #3:**

Power increase continues

Continue with next event at LE discretion

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|

**EVENT #4:**

PZR level Xmitter [2RCS*LT459] fails low

**IMF XMT RCS019A (0 0) 0**

PZR level transmitter [2RCS*LT459] fails low.

**IMMEDIATE PLANT RESPONSE:**

A4-1C PZR CONTROL LEVEL DEVIATION LOW (L0493D)

A4-1B PZR CONTROL LEVEL LOW (L0491D)

[2CHS*LCV460A], [2CHS*AOV200A,B,C] close

PZR heaters off.

RO recognizes problem with PZR level channel, informs US that [2RCS*LT459] failed low.

RO places [2CHS*FCV122] in manual to reduce charging flow and control PZR level

Crew refers to ARP and **OM 2.6.4.IF ATT #1**, US directs operator to defeat level control input with PZR level channel and recorder selector switches.

Level alarms clear, charging flow reduces, high flow alarm clears.

RO places Channels 460 and 461 in service.

Adequate M/U to VCT exists

RO verifies M/U to VCT

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | PZR heaters energized as desired | | RO places PZR heaters in operation as necessary to restore normal PZR pressure control |
| | | | US directs operators to restore Letdown flow IAW **2OM-7.4.AB** |
| | [2CHS*FCV122] - CLOSED | | RO places [2CHS*FCV122] in manual and closes the valve |

|---|---|---|---|

**EVENT #5:**

'C' BPFRV Controller fails to 100%

**IMF CNH-CFW15B (0 0) 100**

'C' BPFRV Controller fails to 100%

**IMMEDIATE PLANT RESPONSE:**

[2FWS*FCV499] travels to the fully open position

A6-11F LOOP C FEEDWATER FLOW > STEAM FLOW (F0477D)

'C'SG NR LEVEL (3 indicators VB C) increases rapidly

RCS Tavg begins to reduce (3 indicators, 1 recorder VB B)

A6-11E SG 21C LEVEL DEVIATION FROM SETPOINT (L0479D)

BOP identifies problem with "C" SG level control, reports to the crew

[2FWS*FCV499] in manual & throttled closed

"C" SG level returning to normal

US directs BOP to take manual control of "C" BPFRV and restore level

Crew refers to **ARPs**

Continue with next event at LE *discretion*

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|

**EVENT #6:**

Steam leak develops in CNMT on "C" SG over a ten minute period

**IMF MSS01C (0 0) 1E6 600**

Steam leak develops on "C" SG

**IMMEDIATE PLANT RESPONSE:**

CNMT Temp, Pres and Humidity slowly increase (indicators VB A)

A1-1E CONTAINMENT AIR PRESSURE HIGH/LOW (Y5023D, UCP031)

A2-2B UNIDENTIFIED LEAKAGE SYSTEM TROUBLE

A1-1F CONTAINMENT AIR AVERAGE TEMP HIGH/LOW (Y5022D)

A1-2G INCORE INST ROOM/CNMT SUMP LEVEL HIGH/VALVE NOT RESET (L0002D)

Crew notes alarms, diagnose steam leak inside CNMT

CNMT condition continue to degrade

US directs manual reactor trip manual SI due to degrading plant/CNMT conditions

Crew enters **E-0**, performs immediate operator actions.

Crew performs IMAs of **E-0.**

| Examiners: | _____ | Candidates: | _____ | | SRO |
| | _____ | | _____ | | ATC |
| | _____ | | _____ | | BOP |

Initial Conditions: MOL, 75 % power Equ Xe, CB = 188, 1116 PPM IC-166

Turnover: Maintain current plant conditions

Critical Tasks:

1. E-1.C Crew trips all RCPs when RCS to highest SG D/P criteria is exceeded and SI flow verified prior to exiting procedure E-1.
2. FR-S.1.C Crew inserts negative reactivity into the core by inserting RCCAs before completing the immediate action steps of FR-S.1.
3.

| Event No. | Malf. No. | Event Type | Event Description |
|---|---|---|---|
| 1 | XMT-MSS022A | I(BOP/SRO) *SRO T.S.* | [2MSS*FT485] "B" SG Selected Steam Flow Channel drifts HIGH |
| 2 | XMT-LDS003A | I(RO/SRO) | VCT Level control channel failure LOW |
| 3 | XMT-RCS032A | *SRO T.S.* | [2RCS*PT455] PRZR Pressure Protection Channel fails HIGH |
| 4 | | R(RO)<br>N(BOP/SRO) | Power reduction due to TS 3.0.3 requirement<br>(No TS Action addressing two channels of OTΔT being inoperable) |
| 5 | RCP01A | C(RO/SRO) | RCP #1 seal leakoff excessive (requires Rx trip) |
| 6 | PPL01A<br>PPL01B | M(ALL) | ATWS – Failure of auto/manual Rx trip |
| 7 | LOA-AFW022<br>PPL07B | C(BOP/SRO) | [2FWE*P22], Turbine driven AFW pump trips during S/U, [2FWE-P23B] Motor Driven AFW Pump requires manual start |
| 8 | VLV-RCS032A | M(ALL) | PORV [2RCS*PCV455C] sticks open after auto open and its block valve [2RCS*MOV535] cannot be closed from CR (PRZR Vapor space leak) |

(N)ormal, (R)eactivity, (I)nstrument, (C)omponent, (M)ajor

The crew will assume the shift at approximately 75% power BOL equilibrium Xenon. Power Range Channel N-42 is OOS and remove from service IAW AOP 2.2.1C, Power Range Channel Malfunction. Motor driven AFW pump 2FWE*P23A is also OOS. Crew instructions are to maintain the plant at 75% power. After the crew assumes the shift, the controlling channel of steam flow on the "B" steam generator [2MSS*FT485] will drift HIGH. The crew will respond to the alarms and implement the actions of instrument failure procedure OM 2.24.4.IF ATT #3 and take manual control of SGWLC on the "B" SG. The crew will swap controlling channels and return SGWLC to automatic. After the US implements the required Technical Specification actions, VCT level transmitter 2CHS*LT115 will FAIL LOW causing automatic make-up to VCT to begin. The crew will STOP the automatic make-up to VCT and respond to the alarms and implement the actions of instrument failure procedure OM 2.7.4.IF ATT #1. From this point on in the scenario, all VCT make-ups will need to be initiated manually. After stabilizing the plant, PRZR Pressure Protection channel 2RCS*PT455 will FAIL HIGH. The crew will respond to the annunciators and implement the actions of instrument failure procedure OM 2.6.4.IF ATT #2. While performing the actions of the procedure and Technical Specifications, the crew MUST recognize that there are NOW 2 channels of OTΔT OOS and Technical Specification 3.0.3 is applicable. Plant management instructs the crew to begin an immediate power reduction to comply with Technical Specification 3.0.3 actions. The crew begins a power reduction IAW 2OM-52.4.B, Load Follow. During the power reduction, #1 seal on the "B" RCP will degrade. The crew will respond to the alarms and implement the actions of AOP 2.6.8, RCP Malfunction. The seal degradation will worsen to the point where the AOP 2.6.8, RCP Malfunction will require the crew to initiate a manual reactor trip. The crew will enter E-0, Reactor Trip or Safety Injection only to find that manual and automatic reactor trips will not function. The crew will transition to FR-S.1, Response to Nuclear Power generation – ATWS. The actions of FR-S.1, Response to Nuclear Power generation – ATWS will be complicated by the steam driven AFW pump tripping during start-up and motor driven AFW pump 2FWE*P23B failing to automatically start. This will require the crew to manually start motor driven AFW pump 2FWE*P23B. The actions of FR-S.1, Response to Nuclear Power generation – ATWS will be further complicated by PRZR PORV failing to close, after automatically opening, and its associated block valve cannot be fully closed. (PRZR VAPOR SPACE LEAK). The reactor will be tripped locally by the operator dispatched during FR-S.1, Response to Nuclear Power generation – ATWS performance. The crew will transition back to E-0, Reactor Trip or Safety Injection and perform the actions to verify ECCS equipment operating and diagnose the vapor space leak. The crew will then transition into E-1, Loss of Reactor or Secondary Coolant and perform the actions to stabilize the plant. The scenario is terminated when the crew transitions into ES-1.2, Post LOCA Cooldown and Depressurization.

**EOP Flow Path:**
E-0, Reactor Trip or Safety Injection → FR-S.1, Response to Nuclear Power generation – ATWS → E-0, Reactor Trip or Safety Injection → E-1, Loss of Reactor or Secondary Coolant → ES-1.2, Post LOCA Cooldown and Depressurization

**INITIAL CONDITIONS:** 75 % Power, CBD = 188, EQU XE MOL, 1116 PPM Boron, IC-166

## SHIFT TURNOVER INFORMATION

1. Protected Train is Train "B"
2. N-42 removed from service per **AOP 2.2.1C**,
3. [2FWE*P23A] Motor ground, repair estimate is 8 - 10 Hrs.
4. Maintain current plant conditions.

## SCENARIO SUPPORT MATERIAL REQUIRED

Reactivity plan placard for MOL
Placard for [2FWE*P22] position stating [2FWE*P22] is aligned to "A" header
Place plaque on wall for Protected Train "B"

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| Initialize IC Set 166, and establish initial plant conditions. | Reactor plant at 75% power, MOL, equilibrium conditions. RCS boron 1116 PPM, CBD = 188 steps. | | |
| Insert the following per the Simulator Setup section of the HTML File for this drill: | Inserts all pre-loads required to support the drill | | |
| **IRF LOA-HIV055 (0 0) 1** | [2FW*P23A] breaker racked out | | |
| **IMF PPL02A (30 120)** | Train A trip BKR open | | |
| **IMF PPL02B (30 130)** | Train B trip BKR open | | |

Facility: BVPS 2 Scenario No.: 3 Op Test No.: NRC

Examiners: _____ Candidates: _____ SRO

_____ _____ ATC

_____ _____ BOP

Initial Conditions: MOL, 75 % power Equ Xe, CB = 188, 1116 PPM IC-167

Turnover: Plant has been at 75% for three days at system request. Crew is to return the unit t full power at 12%/Hr IAW 2OM-52.4.B, Load Follow, and the reactivity plan provided by Reactor Engineering. [2FWE*P23A] Motor Driven AFW Pump is on clearance for motor replacement and is due to be returned tomorrow. [2SAS-C21E] Station Air Compressor is on clearance for bearing replacement and due to be returned 2 days from now.

Critical Tasks:
1. E-0.Q Crew manually trips the main turbine before a Severe (orange path) challenge develops to either the Sub-criticality or the Integrity CSF o before transition to ECA-2.1, whichever occurs first.
2. FR-H.1.A Crew establishes feedwater flow into at least one SG before RCS feed and bleed is required.

| Event No. | Malf. No. | Event Type* | Event Description |
|---|---|---|---|
| 1 | NIS03D | I (RO/SRO)<br>*SRO T.S.* | PRNI N-44 fails HIGH causing automatic control rod insertion |
| 2 | CRF03-H14 | *SRO T.S.* | Misaligned rod. During control rod motion, Control R d H-14 will drop to some position below the group and then remain stuck at that position |
| 3 | | R (RO)<br>N (BOP/SRO) | Normal power reduction |
| 4 | PMP-CFW05 | C (BOP/SRO) | [2FWS-P21B], Main Feedwater Pump trips |
| 5 | PMP-CFW04 | M (ALL) | [2FWS-P21A], 2nd Main Feedwater Pump trips |
| 6 | EHC08A | C (BOP/SRO) | Main Turbine fails to auto trip, manual trip successful |
| 7 | LOA-AFW022<br>PMP-AFW002 | M (ALL) | [2FWE*P22] Turbine driven AFW Pump trips during startup [2FWE*P23B] Motor driven AFW Pump Trip resulting in Entry into FR-H.1 Loss of Secondary Hea Sink. |

(N)ormal, (R)eactivity, (I)nstrument, (C)omponent, (M)ajor

The crew will assume the shift at approximately 75% power BOL equilibrium Xenon. Motor driven AFW pump 2FWE*P23A is OOS. Station air compressor 2SAS-C21B is also OOS. Crew is to raise power at 12%/hr IAW 2OM-52.4.B, Load Follow. Before the crew can begin raising power, Power range channel N-44 FAILS HIGH which causes automatic control rod insertion at 72 SPM. During the rapid rod insertion, rod H-14 drops to a position below the group and becomes stuck at this position. The crew responds to the alarms and implements the actions of AOP 2.2.1C, Power Range channel Malfunction and AOP 2.1.3, RCCA Control Bank Inappropriate Continuous Movement. The crew will manually stop the inward rod motion and stabilize the plant. After the plant is stable, the US will then implement AOP 2.1.8, Rod Inoperability and implement the required Technical Specification actions for both the failed N44 and stuck rod. After the Technical Specifications have been addressed, reactor engineering/plant management directs an immediate power reduction to 50% to gather data and assess the impact of the stuck control rod. The crew begins the power reduction. During the power reduction, Main feed pump 2FWS-21B trips. The crew responds to the alarms and implements the actions of AOP 2.24.1, Loss of Feedwater. When the crew attempts to start the startup feed pump 2FWS-P24 it will NOT start. The crew will be required to commence a rapid load reduction to 50% power as part of the loss of feedwater AOP. During the load reduction, the 2$^{nd}$ main feed pump trips. This will require the crew to manually trip the reactor and enter E-0, Reactor Trip or Safety Injection. The actions of E-0, Reactor Trip or Safety Injection will be complicated by a failure of the turbine to automatically trip. The crew will be required to manually trip the turbine. The actions of E-0, Reactor Trip or Safety Injection will be further complicated by a failure of the steam driven and only operable motor driven AFW pumps. The crew will transition into ES-0.1, Reactor Trip Response. While in ES-0.1, a RED PATH will be identified on Heat sink No AFW flow and NR levels less than 12%. This will require the crew to transition into FR-H.1, Loss of Heat Sink (RED PATH). The crew will remain in FR-H.1 and restore the heat sink by depressurizing the steam generators and establishing condensate flow to the steam generators. After establishing condensate flow, the crew will transition back to ES-0.1, Reactor Trip Response The scenario is terminated when condensate flow is established and a transition has been made back to ES-0.1.

**EOP Flow Path:**
E-0, Reactor Trip or Safety Injection → ES-0.1, Reactor Trip Response → FR-H.1, Loss of Heat Sink → ES-0.1, Reactor Trip Response

**INITIAL CONDITIONS:** 75 % Power, CBD = 188, EQU XE, MOL, 1116 PPM Boron IC-167 (bighorn21)

Initial Conditions: BOL, 100% power Equ Xe, CB 229, 1459 PPM IC-168

Turnover: Maintain current plant conditions
2CHS*P21C HHSI Pump OOS. Will be returned in approximately 1 week

Critical Tasks:
1. E-0.A Crew manually trips the reactor from the control room before performing the mitigation strategy of FR-S.1.
2. E-0.D Crew manually actuates at least one train of SIS-actuated safeguards before transition to any ORP.
3. ECA-3.1.B Crew initiates cool down of the RCS to cold shutdown conditions at the highest rate achievable but less than 100°F per hour in all RCS cold legs.

(N)ormal, (R)eactivity, (I)nstrument, (C)omponent, (M)ajor

The crew will assume the shift at 100% power BOL equilibrium xenon. HHSI pump 2CHS*P21C is OOS. The crew is instructed maintain current plant conditions. After the crew assumes the shift, Selected first stage pressure transmitter 2MSS*PT446 will FAIL LOW. Control rods will begin stepping inward. The crew will verify no load rejection and then place rod control to manual. The crew will then implement the actions of instrument failure procedure OM-24.4.IF Att.# 5 and stabilize the plant. The crew will swap controlling first stage pressure transmitters. After the US implements the required Technical Specification actions, HHSI pump 2CHS*P21B will trip. The crew will implement the actions of AOP 2.7.1, Loss of Charging/Letdown. Crew will isolate letdown and start the standby HHSI pump 2CHS*P21A. After the standby HHSI pump is started and letdown restoration is underway, and the US has implemented the appropriate Technical Specification actions, plant management will direct a power reduction to comply with the Technical Specification actions for only one operable HHSI pump. During the power reduction PRZR pressure control channel 2RCS-PT444 will FAIL HIGH. This will cause PRZR PORV 2RCS*PCV455C to open. PRZR PORV 2RCS*PCV455C will stick open forcing the crew to manually close the block valve. When the crew stabilizes the plant, a 350 GPM tube rupture will occur. The reactor will fail to trip automatically but can be tripped from the control room BB-A switch ONLY (BB-B switch will not work). The crew will enter E-0, Reactor Trip or Safety Injection. The actions of E-0 will be complicated by the failure of SI to automatically actuate, this will require the crew to manually actuate SI. The crew will verify ECCS equipment operating and diagnose a SGTR. The crew will transition into E-3, SGTR. The actions of E-3 will be complicated by the failure of all MSIVs to CLOSE. This will require the crew to transition into ECA-3.1, SGTR With Loss Of Reactor Coolant – Subcooled Recovery Desired. The scenario is terminated when a cooldown to mode 5 has commenced in ECA-3.1.

**EOP Flow Path:**
E-0, Reactor Trip or Safety Injection → E-3, SGTR → ECA-3.1, SGTR With Loss Of Reactor Coolant – Subcooled Recovery Desired.

**INITIAL CONDITIONS:** 100% Power, BOL, CB D = 229, 1459 PPM Boron IC-168

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|

**NOTE:** the following Events #4 through 7 will occur **simultaneously.** All commands are **PRE-LOADED** and will actuate when **Trigger 30** is fired

**EVENTS#4, 5,6 7**

(4)
[2RCS-PT444] Fails high
**IMF XMT-RCS030A (30 0) 2500**
(5)
[2RCS*PCV455C] Sticks open
**IMF VLV-RCS032 (30 0) 1**
(6)
Automatic reactor trip failure
**IMF PPL01A (0 0) 0**
**IMF PPL01B (0 0) 0**
Manual trip from BB B unsuccessful
**IOR XB1I021T (0 0) 0**
(7)
350 GPM SGTR on "C" SG
**IMF RCS04C (30 0) 350**

**IMMEDIATE PLANT RESPONSE:**

Annunciators actuate:

A4-1D PRESSURIZER CONTROL PRESSURE HIGH/LOW (P0501D)

A4-1E PRESSURIZER CONTROL PRESSURE DEVIATION HIGH/LOW(P0503D)

A4-2F PRESSURE RELIEF BLOCK (P0496D)

A4-1A PRESSURIZER POWER/SAFETY RELIEF TROUBLE (T0480D)

A4-1F – PRESSURIZER PORV OPEN PERMISSIVE (Y6672D) (immediate reset)

A2-4B REACTOR COOLANT SYSTEM SUBCOOLING OFF NORMAL (T0761D)

A4-5A RADIATION MONITORING SYSTEM TROUBLE (R0003D)

A4-5C RADIATION MONITORING LEVEL HIGH (R0004D)

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| **WHEN DIRECTED:** | | | |
| **TRG! 30** | | | |
| | [2RCS*LI459A, LI461, LI460] PZR level CH I, III, II begin to decrease (BB B) | | |
| | [2RCS*PI455, PI456, PI457] PZR pres CH I, II, III begin to decrease (BB B) | | |
| | [2RCS-PI445] PZR control pres indicator begins to decrease (VB B) | | |
| | [2RCS-PR441] RCS Wide range pressure recorder red/green pens begin to decrease (VB A) | | |
| | RCS pressure rapidly reducing | | RO verifies alarms, diagnose [2RCS-PT444] has failed high |
| | [2RCS*PCV455A,B] – CLOSED | | RO closes Spray Valves, reduces MPC output to 0 |
| **EVENT #5** | [2RCS*PCV455C] – **STUCK OPEN** | | RO attempts to close [2RCS*PCV455C] reports it **does not close** |
| | [2RCS*MOV535] – TRAVELING CLOSED | | RO closes [2RCS*MOV535] |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | **1ST OUT ANNUNCIATOR:** A5-4H<br>PRESSURIZER PRESSURE LOW<br>REACTOR TRIP (P0488D) | | RO Reports 1st OUT Annunciator A5-4H |
| **EVENT #6** | Reactor – **NOT TRIPPED** | | RO reports failure of automatic trip |
| **CRITICAL TASK**<br>Crew manually trips the reactor from the control room before performing the mitigation strategy of FR-S.1. | | | |
| **EVENT #6** | Reactor – **NOT TRIPPED** | | Ro attempts manual trip from BB B, reports **UNSUCCESSFUL** |
| **EVENT #6** | Reactor – **TRIPPED** | | Ro attempts manual trip from BB A, reports **SUCCESSFUL** |
| | [2RCS*MOV535] – **CLOSED** | | RO reports [2RCS*MOV535] closed after reactor trip |
| **EVENT #7** | RCS Pressure **APPEARS** to recover until the effects of the SGTR are seen | | RO monitors RCS pressure and **MAY** report that it is recovering until the SGTR effects are seen |
| Crew enters **E-0,** performs immediate operator actions. | | | Crew performs IMAs of **E-0.** |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | Annunciator A5-6D TURBINE TRIP DUE TO REACTOR TRIP - LIT<br>Power range indication - LESS THAN 5%<br>Neutron flux - DROPPING | | RO verifies reactor tripped. |
| | Throttle Valves - ALL CLOSED<br>OR<br>Governor Valves - ALL CLOSED<br>Main Generator Output Bkrs - OPEN<br>Exciter Circuit Bkr - OPEN | | BOP verifies turbine tripped. |
| | AC Emergency Busses - BOTH ENERGIZED | | BOP verifies power to AC Emergency Buses. |
| | Check SI ACTUATED<br>CNMT Pressure - > 5PSIG<br>PZR Pressure - < 1860 PSIG<br>SG Steam Pressure - < 500 PSIG | | RO checks SI status<br><br>**CREW DETERMINES SI REQUIRED** |
| Crew continues **E-0** | Manually actuate SI (both trains) | | RO manually actuates SI both trains |
| | Alert Plant Personnel | | RO/BOP sound Standby Alarm, announce reactor trip and safety injection |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | Check [2HVS*FN204A(B)], Leak Collection Filtered Exhaust Fan – AT LEAST ONE RUNNING | | BOP checks Leak Collection Exhaust Fan status |
| **EVENT #8:**<br><br>**(PRE-LOADED)** | Charging Pumps – **ONE** RUNNING<br>HHSI Flow – INDICATED<br>LHSI Pumps – TWO RUNNING | | RO verifies SI System status, reports auto SI failure on **BOTH** Trains, **MANUALLY** actuates both trains of SI |
| Both trains of auto SI fail to actuate, manual actuation successful<br><br>**IMF PLP05A (0 0) 0**<br>**IMF PLP05B (0 0) 0** | **BOTH TRAINS OF AUTO SI FAILURE**<br><br>**ONLY ONE HHSI PUMP OPERATING** | | |
| **CRITICAL TASK**<br>Crew manually actuates at least one train of SIS-actuated safeguards before transition to any ORP. | | | |
| | Motor-driven AFW Pumps – RUNNING<br>Turb driven AFW Pump Stm Supply Isol Valves – OPEN<br>AFW Throttle Vlvs – FULL OPEN<br>Total AFW Flow – GREATER THAN 340 GPM | | BOP verifies AFW System status |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | Perform **Attachment A-0.11** "Verification Of Automatic Actions" in a timely manner | | US directs performance of **Attachment A-0.11** when time/manpower permit |
| **Attachment A-0.11** is included and begins on page 31 of scenario | **LIST ATT A-0.11 DISCREPANCIES AS APPLICABLE:** | | |
| | **Manual SI required – BOTH TRAINS ONLY ONE HHSI PUMP RUNNING** | | |
| | **RCPs OPERATING – MONITOR Tavg**<br>RCPs STOPPED MONITOR Tcold | | RO/BOP check RCS Tavg stable at or trending to 547°F |
| | **Check CIB – HAS NOT ACTUATED** | | RO checks Recirc Spray Pump status |
| | PORVs – **2 CLOSED** –<br>[2RCS*PCV455C] Stuck **OPEN, ISOL by [2RCS*MOV535]**<br>Spray Valves – CLOSED<br>Safety relief valves – (PSMS Detailed Data Page 1) – CLOSED<br>Check PRT conditions – CONSISTENT WITH **EXPECTED** VALUES<br>Power to at least one block valve – AVAILABLE<br>Block valves – AT LEAST ONE OPEN | | RO verifies PZR isolated |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | D/P between RCS pressure and highest SG pressure – LESS THAN 205 PSID [220 PSID ADVERSE CNMT]<br>AND<br>HHSI Flow – INDICATED | | RO checks if RCPs should be stopped<br><br>**RO DOES NOT STOP RCPs** |
| | Pressures in all SGs – ANY DROPPING IN AN UNCONTROLLED MANNER<br>OR<br>ANY SG COMPLETELY DEPRESSURIZED | | BOP checks if any SGs are faulted.<br><br>**BOP REPORTS SGs NOT FAULTED** |
| | Check all SG levels – **"C" IS** RISING IN AN UNCONTROLLED MANNER<br>Check Secondary Radiation – CONSISTENT WITH PRE-EVENT VALUES<br>[2ARC-RQ100] Air Ejector Discharge (1007)<br>[2SSR-RQ100] SG Blowdown Sample (1062)<br>[2MSS*RQ101A,B,C] Main Steamline Discharge (1005, 3005, 5005) | | Crew checks if SG tubes are intact<br><br>**CREW REPORTS INDICATION OF SGTR ON "C" SG** |
| **Crew transitions to E-3 STEP 1** | | | US directs transition to **E-3**<br><br>US directs STA to monitor status trees |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | CREVS not actuated | | BOP checks if CREVS should be activated |
| | CR radiation not in high alarm | | |
| | CIB has not occurred | | Crew commences control room ventilation action per **Attachment A-2.5** |
| | D/P between RCS pressure and highest SG pressure – LESS THAN 205 PSID [220 PSID ADVERSE CNMT]<br>AND<br>HHSI Flow – INDICATED | | RO checks if RCPs should be stopped<br><br>**RO does not stop RCPs** |
| | "C" SG ruptured | | US identifies **"C" SG** as the ruptured SG |
| | Unexpected rise in NR level | | |
| | Rad survey results:<br>ANY SAMPLE<br>[2MSS*RQ102A,B,C] SG N-16 monitors (1075, 2075, 3075)<br>[2MSS*RQ101A,B,C] Main Stm Monitors (1005, 3005, 5005)<br>High Radiation from any SG BD rad monitor | | |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | | | US directs crew to isolate flow from the ruptured SG |
| **IF REQUESTED:** | Close atmospheric steam dump on ruptured SG [2SVS*PCV101C] | | BOP closes "C" SG atmospheric steam dump [2SVS*PCV101C] |
| **IRF LOA-MSS018 (0 0) 0** **To close [2SVS*25]** | | | Setpoint raised to 100% |
| | Check Residual Heat Release valve – CLOSED | | BOP closes [2SVS*HCV104]. |
| **IRF LOA-MSS011 (0 0) 0** **To close [2SVS*29]** | Check Residual Heat Release Valve from faulted SG CLOSED: SG 21A [2SVS*29] | | Crew dispatch operator to close [2SVS*29] |
| | **2 RUNNING** | | BOP checks motor driven AFW pumps |
| | [2MSS*SOV105C & F] CLOSED | | BOP closes [2MSS*SOV105C & F] |
| | SG-21C blowdown isol valve [2BDG*AOV100C1] CLOSED | | BOP closes SG 21C blowdown isol vlv |
| | SG-21C Main Stm Line drain [2SDS*AOV111C1] CLOSED | | BOP closes SG 21C main steamline drain vlv |
| | RHR Piping Drain [2SDS*AOV129A] CLOSED | | BOP closes RHR Piping drain vlv |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| **EVENT #7 (continued):** | 3 BVPASS VLVS - CLOSED | | BOP reports Bypass valves closed |
| **(PRE-LOADED)** | | | |
| **3 MSIVs Stuck open** | **NO MSIVs** can be closed | | BOP reports that all **3 MSIVs** are stuck open and cannot be closed |
| **IMF VLV-MSS003**<br>**IMF VLV-MSS004**<br>**IMF VLV-MSS005** | | | **RUPTURED SG CANNOT BE ISOLATED FROM 1 INSTACT SG, GO TO ECA-3.1** |
| Crew transitions to **ECA-3.1 Step 1** | | | |
| | SI, CIA & CIB - RESET | | RO resets SI, CIA & CIB |
| | Open [2CCS-AOV118] Domestic Water to Station Air Compressor | | Establish Domestic Water System Cooling to Station Air Compressors |
| | | | US directs additional personnel to perform **Att A-1.20** as manpower permits |
| | At least one Station Air Compressor – RUNNING | | Start 1 Station Air Compressor as required |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | [2IAC-MOV131] & [2IAC*MOV130] – OPEN | | Crew establishes Inst Air to CNMT |
| | CNMT Inst Air Press > 85 PSIG | | |
| | All AC Busses – ENERGIZED BY OFFSITE POWER | | BOP checks 4KV electrical status |
| | All PZR HTRS – PULL TO LOCK | | RO places PZR HTRS in PTL |
| | Quench/Recirc Spray Pumps – **NONE RUNNING** | | Crew checks if CNMT spray should be stopped |
| | "C" SG level > 12% [31% ADVERSE CNMT] | | BOP checks ruptured SG level |
| | [2FWE*HCV100A,B] - CLOSED | | Crew isolates feed flow to "C" SG |
| | [2FWS*HYV157C] CLOSED | | Check FWI previously verified |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | RCS Pressure - > 225 PSIG [250 PSIG ADVERSE CNMT] | | RO checks if LHSI Pmps should be stopped |
| | Pressure – STABLE OR RISING | | |
| | LHSI Pmps stopped and in auto | | RO stops LHSI Pmps and places them in auto |
| | Aux Bldg/Safeguards radiation – CONSISTENT WITH PRE-EVENT LEVELS | | Crew evaluates plant status |
| | Obtain Pertinent samples | | |
| | Pressures in all SGs – ANY DROPPING IN AN UNCONTROLLED MANNER<br>OR<br>ANY SG COMPLETELY DEPRESSURIZED | | BOP checks if any SGs are faulted.<br><br>Crew checks faulted SGs previously isolated unless needed or C/D |
| | **SGs ARE NOT FAULTED** | | |
| | Total AFW flow maintained >340 GPM until SG level > 12% [31% adverse CNMT] THEN CONTROL AFW flow to maintain level between 26% [33% adverse CNMT] and 50% | | BOP checks intact SG levels, controls AFW flow to intact SGs |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | Shutdown margin requirements are satisfied for cooldown | | US directs chemistry to sample as required,<br>Crew maintains SDM during C/D |
| **CRITICAL TASK**<br>Crew initiates cool down of the RCS to cold shutdown conditions at the highest rate achievable but less than 100°F per hour in all RCS cold legs. | C/D rate - < 100F/Hr<br>Trend initiated/initialed at ½ hr interval<br>RHR used if in service<br>SI blocked when PZR Pres < 2000 PSIG<br>Condenser Stm Dmps operated in MANUAL control to cooldown<br>Tavg interlock blocked < 541F | | Crew initiates cooldown to MODE 5 at < 100F/hr<br><br>BOP operates Condenser Stm Dmps as required to maintain C/D rate W/I limits |
| Terminate drill after proper C/D rate established or at LE discretion | RWST Level - > 600 inches<br>Ruptured (C) SG level - < 95% [79% ADVERSE CNMT] | | Crew checks if subcooled recovery desired<br><br>IF NOT TRANSITION TO ECA 3.2 STEP 1 |
| Classify event at the end of the scenario | | | **ALERT** based on TAB 2.3 entry into E-3 |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| Attachment A-0.11 'Verification of Automatic Actions' performed as time & manpower permit | | | US directs operator to perform Attachment A-0.11 as time & manpower permit |
| | Diesel generators – BOTH RUNNING | | Check both EDGs running |
| | CNMT pressure – GREATER THAN 7 PSIG<br>**OR**<br>SG Steam Pressure – LESS THAN 500 PSIG<br>**OR**<br>Steamline pressure high rate of change – 100 PSIG DROP IN 50 SECONDS | | Check if MSLI is required<br>If **not required**, go to step 4 |
| | Yellow SLI marks - LIT | | Verify steamline isolation |
| STEP 4 | Open [2CCS-AOV118] Domestic Water to Station Air Compressor | | Establish Domestic Water System Cooling to Station Air Compressors |
| | At least one Station Air Compressor – RUNNING | | Start 1 Station Air Compressor as required |
| | CCP pumps – AT LEAST 1 RUNNING | | Check CCP Pump status |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| | [2NME-NR45] Nuclear Recorder selected to operable source and intermediate range displays | | Align neutron flux monitoring for shutdown |
| | CNMT pressure – HAS REMAIND LESS THAN 11 PSIG | | Check CIB status |
| | IF NOT | | Actuate CIB if required |
| | Manually initiate CIB – BOTH SWITCHES FOR BOTH TRAINS | | |
| | Manually align equipment as required<br>All RCPs – STOPPED<br>BV-1 operator verifies CREVS actuation<br>Service water established to RSS HX(s) | | Stop ALL RCPs |
| | Service Water Pumps – 2 RUNNING<br>Service Water Header Pressure – GREATER THAN 55 PSIG<br>SWS Seal Water Pressure – NOT LOW | | Verify Service Water System in service |
| | [2HCS*SOV100A1, B1] – CNMT Sample amber light – LIT | | Verify both CNMT hydrogen analyzers running |

| INSTRUCTIONAL GUIDELINES | PLANT STATUS OR RESPONSE | OBJECTIVE | EXPECTED STUDENT RESPONSE |
|---|---|---|---|
| MANUAL SI REQUIRED<br>ONLY ONE HHSI PMP RUNNING | All Red SIS Marks - LIT<br>All Orange CIA Marks – LIT<br>All Green FWI Marks – LIT | | Verify ESF Equipment status – Start/align equipment as required |
| | Power available to both Emergency AC Busses | | Verify power to both AC Emergency busses |
| | | | Restore power as required |
| | Attachment A-0.11 – COMPLETE | | Report any discrepancies to SM/US |
