Subject: Fermi III

Dear Chief, NRC Rulemaking, Directives and Editing Branch,

I am writing in regard to "Detroit Edison Company Fermi Nuclear Power Plant, Unit 3 Combined License Application Notice of Intent to Prepare an Environmental Impact Statement and Conduct Scoping Process" (Docket ID NRC-2008-0566)

Given the Earth altering effect of human choices today, I ask you to take leadership in new choices and express fierce determination to prevent harm or, where knowledge is limited, to choose a precautionary approach when deciding your methods of ensuring energy which enhances life and the environment.

As a company who will make a difference, I ask you to face the cumulative, long-term, indirect, long distance and global consequences of a Fermi III and other alternatives.

As a company of power, I ask you to actively support energy production which prevents pollution of any part of the environment and allow no build-up of radioactive, toxic or other hazardous substances.

As a company who can lead the charge in even better energy production, I ask that you internalize the full environmental and social cost in the selling price so that consumers can identify choices that meet the highest social and environmental standards.

If is very difficult to change habits. I ask you to be brave in taking action to avoid the possibility of serious or irreversible environmental harm even when scientific knowledge is incomplete or inconclusive. I ask you to be courageous in taking in the information that we are learning and in learning from any mistakes from your field.

We humans can now affect the global climate, environment and life by our actions. We can add to the burden of a withering planet or we can bring enormous relief and safety.

Please turn all your leadership toward clear energy solutions in favor of long-term care and flourishing Earth's human and ecological communities.
Sincerely counting on your openness and determination to support thoughtful energy plans.

Annemarie Askwith
