**Subject:** Fermi 3 License Request

For the sake of future generations, please reject the Fermi 3 proposal. Wind and solar power offer no worst case scenario that we can't deal with. Nuclear power is too dangerous, even the regular releases of radiation through water or airborne pathways endangers all. The nuclear waste issue is still unresolved. Yucca Mountain is above the water table while Canada plans to put mid-level waste under Lake Huron, so it all seems like a big guess as to which is the safest disposal method. The transportation routes to Yucca Mountain endanger every American home. With worst case scenarios to consider with every shipment, thousands planned, too risky. If on site storage becomes the future of the waste issue instead of Yucca Mountain, then how will that affect the water rights of the Great Lakes region? Will more nuclear power demand more water for future cooling demands? Will people have less water rights because cooling issues demand more water? In the areas around nuclear power plants are the people monitored through doctors for health effects of the nuclear releases? Nuclear power never was "too cheap to meter" was always so very dangerous to life and will outlive all generations of humanity.

Please reject Fermi 3 . We don't need more nuclear power, we need more sensible policies. Wind and solar energies offer clean renewable energy.

Thank You,  
Robert Rysztak
