As you know, there are significant uncertainties involved with long-term storage of high level waste, especially at Yucca Mountain.

Because of geologic and container uncertainties, I feel that confidence in the regulation period is unwarranted.

Basically the probabilities and related uncertainties show a danger level of corrosion, leakage through welds, volcanism, seismic activity, climate change having possible effects on precipitation, and water transport into water table, all far too high to make rules which ease the licensing of Yucca Mt., the only area studied for lng-term containment.

Thank you for your own work on this complex subject,
Michael McLaughlin
