Gentlemen,

The North Anna Power Station is not currently in full compliance with the federal Clean Water Act and a third reactor will add to the problems already occurring with warm lake temperatures and downstream flow.

Since Dominion Power is choosing a new reactor model, application for the COL should be put on hold. Once a new reactor model is chosen, then a new environmental assessment should be initiated.

Existing wetlands, streams, and woodlands on the site, as well as downstream, may be adversely affected by the construction and operation of a new reactor.

The semi-permanent storage of radioactive waste at the North Anna site presents health and safety threats to the people of central Virginia. In

1984 the NRC had expressed "confidence" that the problem of high level waste disposal would be resolved in 30 years. This has not happened - Yucca Mt. is unlikely to ever open. No new plants should be licensed until the issue of waste disposal, both high level and low level, is resolved.

Think conservation and the use of biomass first!

Diana Abbott, Free Union, VA
