Subject: Re: EPRI ground motion topical report

EPRI Report 1009684, "CEUS [Central and Eastern United States] Ground Motion Project Final Report," is associated with the NEI/NRC SITAG efforts to support a revision to RG 1.165, the history (as I know it) regarding the project management of this effort is as follows:

- Joe Birmingham (NEI PM) was originally the PM who set up the NEI/NRC SITAG meetings and issued the meeting notices and meeting summaries.
- As the Clinton ESP PM, I would periodically attend the meetings only to observe and learn about the generic aspects that may effect the plant specific Clinton ESP review.
- In the March 2006 time frame, Joe Birmingham spoke with Michelle Honcharik and they agreed that this effort was more appropriate for her to be the PM.
- Shortly after that, Michelle Honcharik contacted Laura Dudes and suggested that this effort be turned over to me because it was in support of New RX activities.
- I spoke with Laura and stated that since this effort to revise the RG would not have any effect on ESPs, but would be used for COLs, that this effort should be managed by the New RX Infrastructure Group. Laura agreed with this approach.

I'm not sure if a PM in the New RX Infrastructure Group was ever identified.

I hope this helps.

John

All,

I do not know who it was assigned to. I had a conversation with Laura Dudes regarding the review. She sent me an e-mail stating that she "had" it. Laura and John Segala were on distribution for the acceptance letter (ADAMS Accession No. ML060690158). This occurred before DNRL re-organized.

Regards,
Michelle

OK. Rob, John and Joe, if you could please get back to us ASAP on whether you got the responsibility for this from Michelle, as we're coming up to the due date and need to talk to SOMEONE about needing to extend that...just not sure who that is now and who has the new PM duties for this....

>>> Amy Cabbage 8/31/2006 8:50 PM >>>

No, I don't have it. Perhaps our infrastructure group took that on when we reorged recently. I have copied Joe Colaccino who is now my acting BC and Rob Tregoning who is the acting branch chief for the new reactor infrastructure group. Perhaps they know who is managing this review. I also copied John Segala because he was involved with seismic issues when he was with DNRL because of the Clinton ESP review.

Amy

I talked to Stephanie, and she says she does not have this item. Amy, did you get responsibility for this item from Michelle?

>>> Michelle Honcharik 8/29/2006 1:34 PM >>>

Becky,

This review is now being tracked by DNRL, but I'm not sure which branch. I've copied Stephanie Coffin and Amy Cubbage. I'm sure one of them will get back to you.

Regards,

Michelle

Michelle,

The current due date for RAIs on the above submittal is 9/15/06. All of our folks have been tied up on new reactor work (Vogtle, DG-1146, SRPs, etc) and have been unable to get to this lower priority submittal. Also, our summer intern didn't have enough background to be able to work on this as we had hoped. We'd like to push back the RAI date to Oct. 31.

Becky
